

# 2-Colour Display

# Digital Flow Switch

Applicable fluid Dry air, N<sub>2</sub>

The PFMB7201 product is being discontinued.  
Please select the new PF2M721 series.  
See [www.smc.eu](http://www.smc.eu) for details.

Wide range of flow measurement  
with one product

Flow ratio<sup>\*1</sup> **100 : 1**

<sup>\*1</sup> Rated flow ratio is 10 : 1 for the current PF2A.

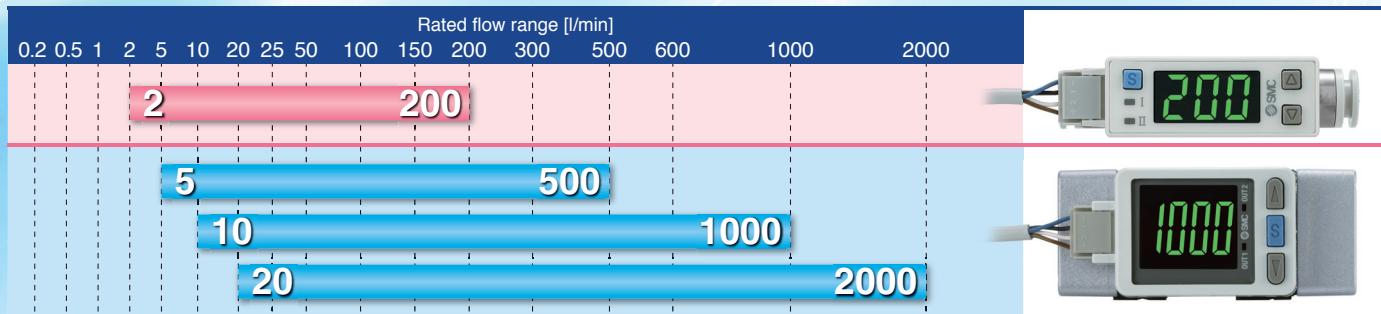

New

3-Screen Display

Digital Flow Monitor

Allows for the monitoring of  
remote lines

PFG300 Series p. 24

## Compact, Space saving

Compared with the current PF2A

Weight Approx. **76 % reduction**

290 g → 70 g

Mounting space Approx.

**81 % reduction**

Compared with the current PF2A

Weight Approx. **66 % reduction**

290 g → 100 g

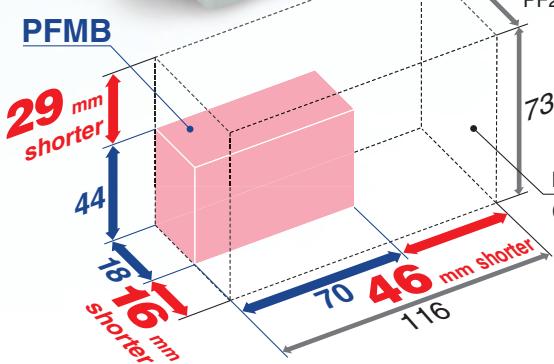

500 L/1000 L/  
2000 L type

Mounting space

**67 % reduction**

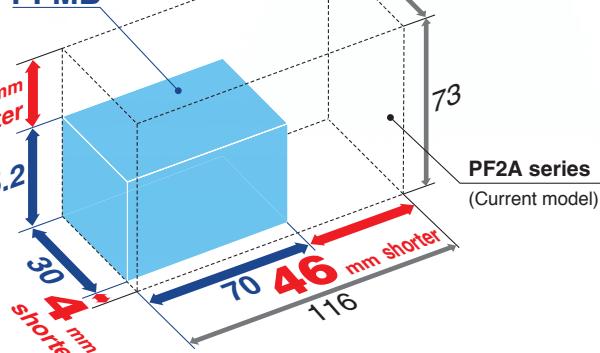

Compared with the  
PFMB7201 and  
PF2A721-03

PFMB

27.8 mm  
shorter

Compared with the  
PFMB7501-04 and  
PF2A751-04

## PFMB Series

SMC®

CAT.EUS100-95C-UK

# 2-Colour Display Digital Flow Switch

**Flow adjustment valve is integrated.**

**200 L type**

Reduces piping installation work and space requirements. Special design provides smooth adjustment to match needle rotations.

**Flow adjustment valve**

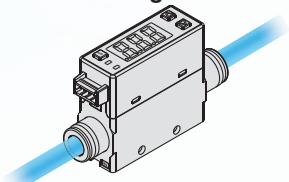

**500 L/1000 L/2000 L type**

## Piping variations

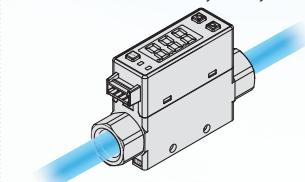

**200 L type**

### Straight

One-touch fitting Ø 8

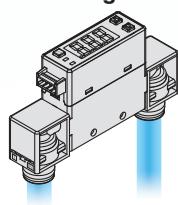

Female thread Rc, NPT, G 1/4

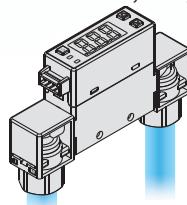

### Bottom

One-touch fitting Ø 8

Female thread Rc, NPT, G 1/4

\* For the straight section of piping, refer to "IN Side Straight Piping Length and Accuracy" on page 12.

## Functions

(Refer to pages 30 and 31 for details.)

- Output operation
- Display colour
- Reference condition
- Display mode
- Response time
- Display OFF mode
- Setting of security code
- External input function
- Forced output function
- Accumulated value hold
- Peak/Bottom value display
- Keylock function
- Analogue output free range function
- Reversible display mode
- Reset to the default settings
- Error display function

## Response time

Can be selected from

**50 ms (0.05 s)/0.1 s/  
0.5 s/1.0 s/2.0 s**

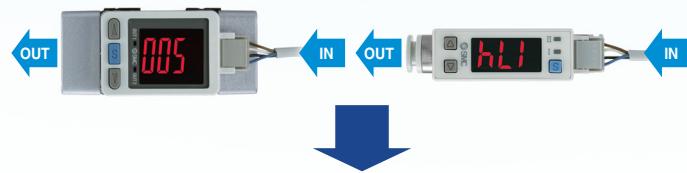

Response time can be set depending on application.

## Grease-free

## Reversible display

When the switch is used upside down, the orientation of the display can be rotated to make it easier to read.

When display is upside down.

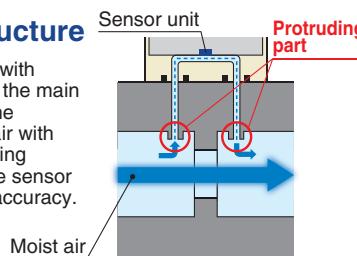

**With a reversible display function  
(Can be set with the reversible display mode.)**

## Bypass structure

Sensor unit      Protruding part

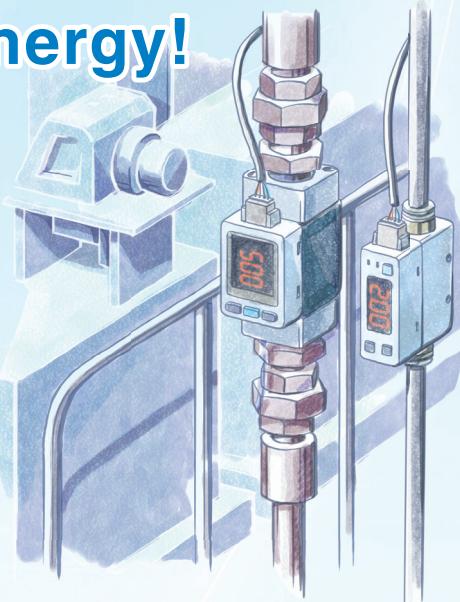

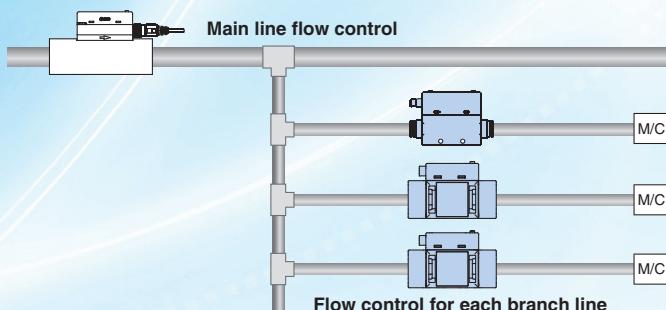

Bypass structure with protruding part at the main piping, reduces the contact of moist air with the sensor, reducing degradation of the sensor and maintaining accuracy.

# Digital flow switch to save energy!

**Flow control** is necessary for promoting energy saving in any application.

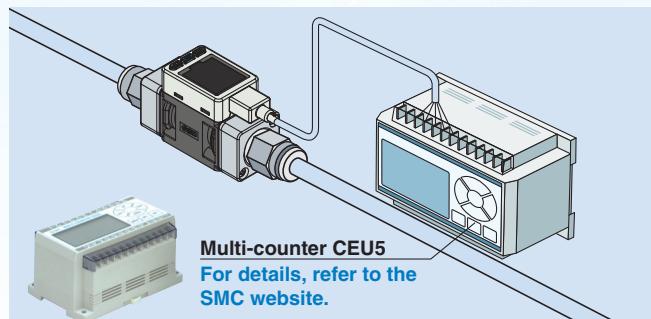

Saving energy starts from numerical control of the flow consumption of equipment and lines and clarification of the purpose and effect.

- Digital display allows **visualization of flow rate**.
- **2-colour** display, Improved visibility

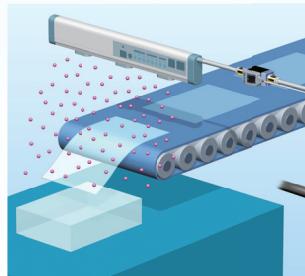

- **Remote control** is possible with accumulated pulse.

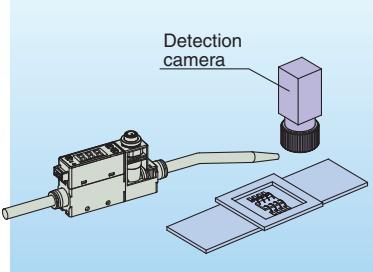

## Applications

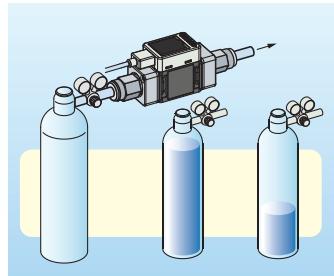

- Control of purge air flow of ionizer
- Flow control of the air for spray painting

- Flow control of N<sub>2</sub> gas to prevent lead frame oxidation
- N<sub>2</sub> blow prevents distortion of camera image due to air turbulence.

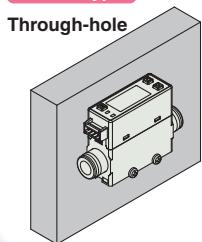

- Accumulated indication shows the operating flow rate or residual amount (of N<sub>2</sub> etc.) in a gas cylinder.

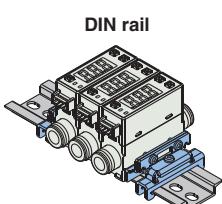

## Mounting

### 200 L type

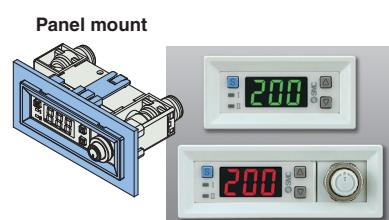

DIN rail

Bracket

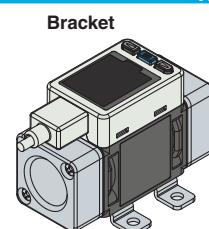

Panel mount

### 500 L/1000 L/2000 L type

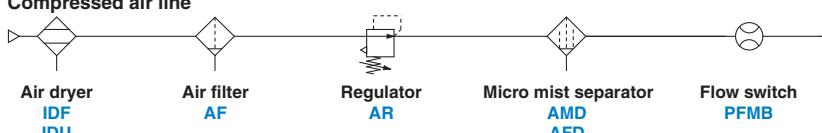

Bracket

### Example of recommended pneumatic circuit

Air quality in the product specification can be satisfied by using this pneumatic circuit.

Compressed air line

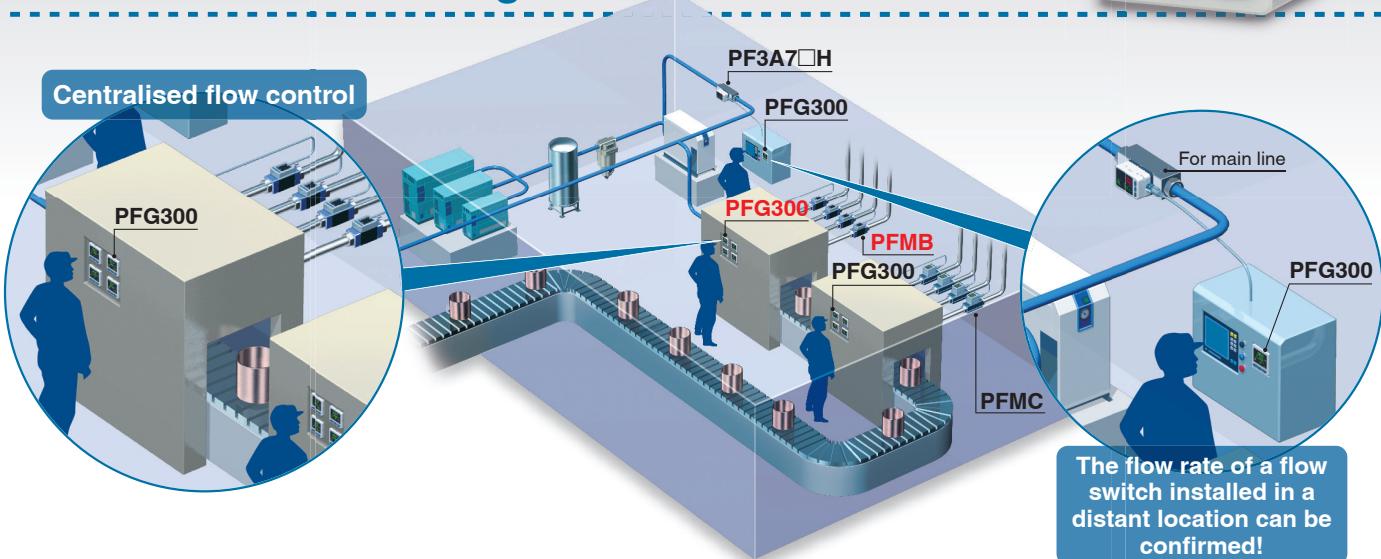

# 3-Screen Display Digital Flow Monitor

PFG300 Series p. 24

## Allows for the Monitoring of Remote Lines

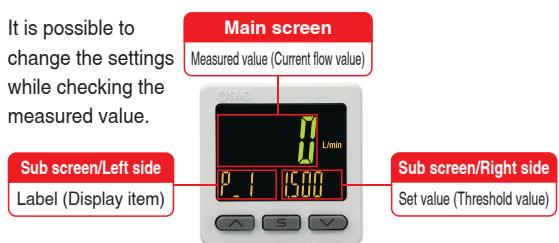

## Visualisation of Settings

The sub screen (label) shows the item to be set.

## Easy Screen Switching

It is possible to change the settings while checking the measured value.

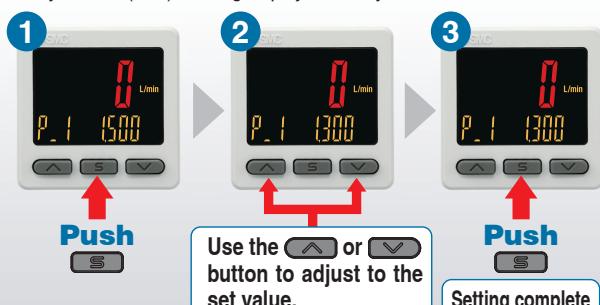

The sub screen can be switched by pressing the up/down buttons.

\* Either "Input of line name" or "Display OFF" can be added via the function settings.

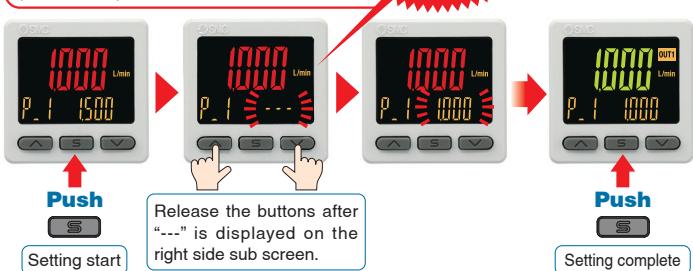

## Simple 3-Step Setting

When the S button is pressed and the set value (P\_1) is being displayed, the set value (threshold value) can be set. When the S button is pressed and the hysteresis (H\_1) is being displayed, the hysteresis value can be set.

### With a snap shot function for set value reading

Pressing the and buttons simultaneously for a minimum of 1 second will make the set value (threshold value) the same as the current flow value.

## NPN/PNP Switch Function

The number of stock items can be reduced.

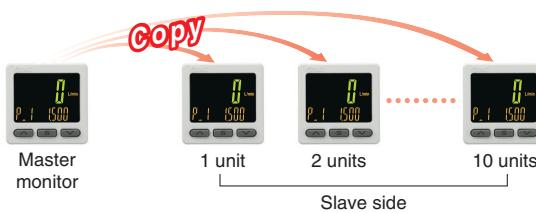

## Analogue output of 0 to 10 V is also available.

Voltage output	1 to 5 V 0 to 10 V	Switchable
Current output	4 to 20 mA	Fixed

## Convenient Functions

### Copy function

The settings of the master monitor can be copied to the slave monitors.

### Security code

The key locking function keeps unauthorized persons from tampering with the settings.

### Power saving mode

Power consumption is reduced by turning off the monitor.

Current consumption*1	Reduction rate*2
25 mA or less	Approx. 50 % reduction

\*1 During normal operation \*2 In power saving mode

### External input function

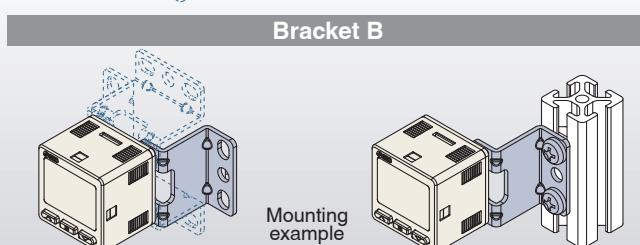

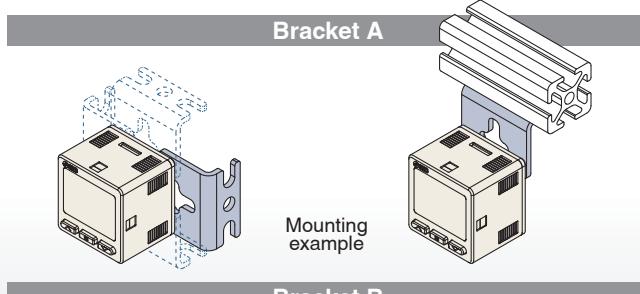

The accumulated value, peak value, and bottom value can be reset remotely.

## Functions (Refer to pages 32 to 34 for details.)

- Output operation
- Simple setting mode
- Display colour
- Delay time setting
- Digital filter setting
- FUNC output switching function
- Selectable analogue output function
- External input function
- Forced output function
- Accumulated value hold
- Peak/Bottom value display
- Setting of security code
- Keylock function
- Reset to the default settings
- Display with zero cut-off setting
- Selection of display on sub screen
- Analogue output free range function
- Error display function
- Copy function
- Selection of power saving mode

## Mounting

The bracket configuration allows for mounting in four orientations.

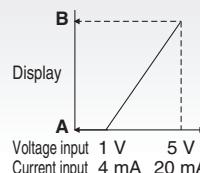

## Input Range Selection (for Pressure/Flow rate)

The displayed value to the sensor input can be set as required.

(Voltage input: 1 to 5 V/Current input: 4 to 20 mA)

Pressure switch/Flow switch can be displayed.

A is displayed for 1 V (or 4 mA).  
B is displayed for 5 V (or 20 mA).  
The range can be set as required.

■ Pressure Sensor for General Fluids/PSE570

	A	B
PSE570	0	1,000
PSE573	-100	100
PSE574	0	500

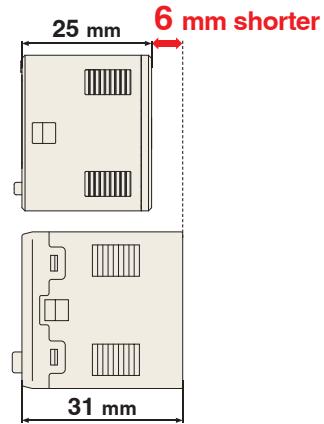

Set A and B to the values shown in the table above.

## Compact & Lightweight

● Compact: Max. 6 mm shorter

● Lightweight: Max. 5 g lighter (30 g → 25 g)

PFG300

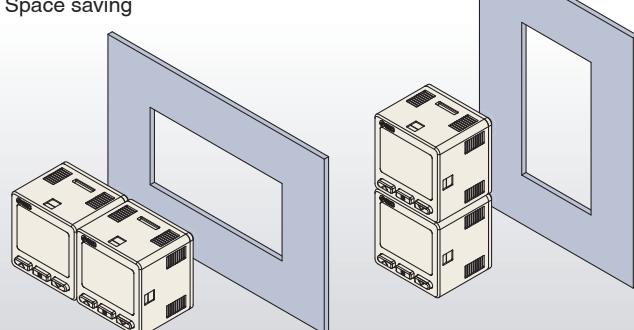

PFM300

### Panel mount

Mountable side by side without clearance

### One opening!

- Reduced panel fitting labour
- Space saving

	DIN rail mounting bracket	+65 g		—		

\*1 Refer to the "Example of recommended pneumatic circuit" on page 2.

\*2 When using the accumulated value hold function, use the operating conditions to calculate the product life, and do not exceed it. The maximum access limit of the memory device is 1 million times. If the product is operated 24 hours per day, the product life will be as follows:

- 5 min interval: life is calculated as 5 min × 1 million = 5 million min = 9.5 years
- 2 min interval: life is calculated as 2 min × 1 million = 2 million min = 3.8 years

If the accumulated value external reset is repeatedly used, the product life will be shorter than the calculated life.

\*3 Do not release the OUT side piping port of the product directly to the atmosphere without connecting piping. If the product is used with the piping port released to atmosphere, accuracy may vary.

\*4 The time from when the flow is changed by a step input (when the flow rate changes from 0 to the maximum value of the rated flow range instantaneously) until the switch output turns ON (or OFF) when set to be 90 % of the rated flow rate

\*5 If the flow fluctuates around the set value, the width for setting more than

the fluctuating width needs to be set. Otherwise, chattering will occur.

\*6 When using a product with an analogue output

\*7 The time from when the flow is changed by a step input (when the flow rate changes from 0 to the maximum value of the rated flow range instantaneously) until the analogue output reaches 90 % of the rated flow rate

\*8 When using a product with an external input

\*9 The flow rate given in the specifications is the value under standard conditions.

\*10 Setting is only possible for models with the units selection function.

\*11 For details, refer to "IN Side Straight Piping Length and Accuracy" on page 12.

\*12 For details, refer to "Construction: Parts in Contact with Fluid" on page 14.

\*13 The accumulated flow display is the upper 3-digit, middle 3-digit, and lower 3-digit (total of 9 digits) display. The position of the dots on the upper part of the screen indicates which digits are displayed.

\* Products with tiny scratches, marks, or display colour or brightness variations which do not affect the performance of the product are verified as conforming products.

## Flow Range

Model	Flow range					
	-100 l/min	0 l/min	200 l/min	500 l/min	1000 l/min	2000 l/min
PFMB7201		2 l/min	200 l/min			
		2 l/min	210 l/min			
	-10 l/min		210 l/min			
PFMB7501		5 l/min		500 l/min		
		5 l/min		525 l/min		
	-25 l/min			525 l/min		
PFMB7102		10 l/min			1000 l/min	
		10 l/min			1050 l/min	
	-50 l/min				1050 l/min	
PFMB7202		20 l/min				2000 l/min
		20 l/min				2100 l/min
	-100 l/min					2100 l/min

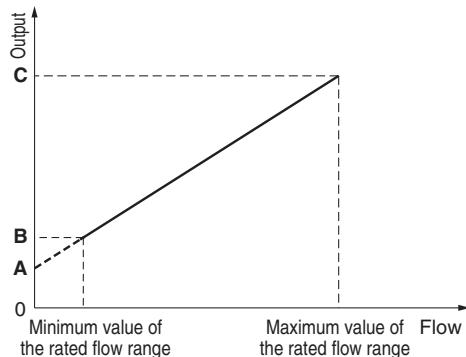

■ Rated flow range ■ Set point range ■ Display range

## Analogue Output

### Flow/Analogue Output

	A	B	C
Voltage output	1 V	1.04 V	5 V
Current output	4 mA	4.16 mA	20 mA

Model	Minimum value of the rated flow range	Maximum value of the rated flow range
PFMB7201	2 l/min	200 l/min
PFMB7501	5 l/min	500 l/min
PFMB7102	10 l/min	1000 l/min
PFMB7202	20 l/min	2000 l/min

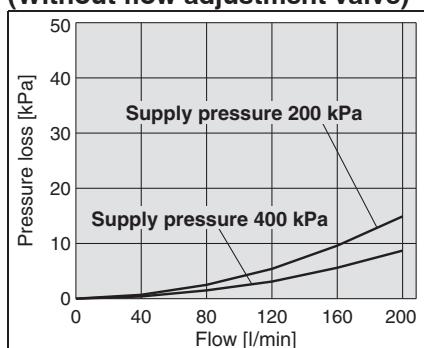

### Flow Adjustment Valve Flow Rate Characteristics (Reference Value)

#### PFMB7201 (for 200 l/min)

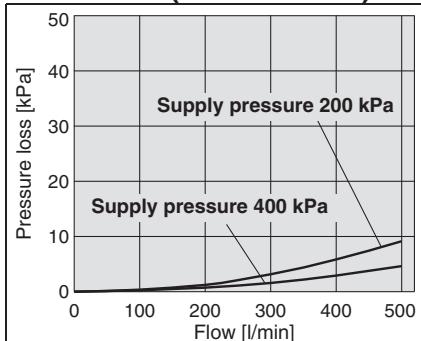

## Pressure Loss (Reference Data)

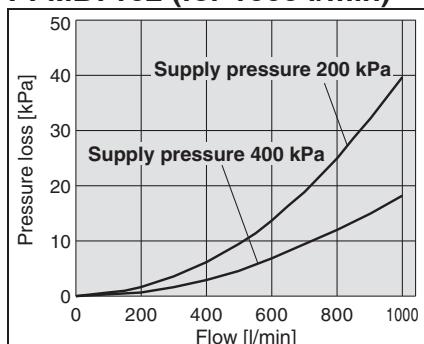

### PFMB7201 (for 200 l/min) (Without flow adjustment valve)

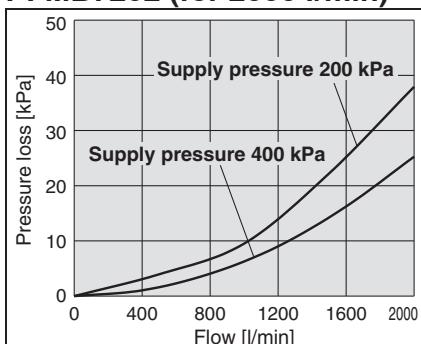

### PFMB7501 (for 500 l/min)

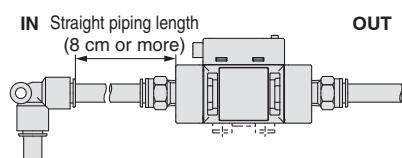

### PFMB7102 (for 1000 l/min)

### PFMB7202 (for 2000 l/min)

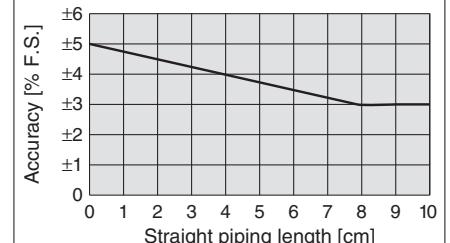

### IN Side Straight Piping Length and Accuracy (Reference Data)

- The piping on the IN side must have a straight section of piping with a length of 8 cm or more. If a straight section of piping is not installed, the accuracy can vary by approximately  $\pm 2\%$  F.S.
- \* "Straight section" means a part of the piping without any bends or rapid changes in the cross sectional area.
- When the PFMB7201 is connected to tubing, use a tube I.D. 5 mm just before the product.
- When the PFMB7501 or 7102 is connected to tubing, use a tube I.D. 9 mm or more just before the product.

The accuracy can vary by approximately  $\pm 2\%$  F.S. when such tubing is not used.

Function Details

# PFG300 Series

## Specifications

For flow switch precautions and specific product precautions, refer to the “Operation Manual” on the SMC website.

Model		PFG300 series						
Applicable SMC flow switch	Model	PFMB7201	PFMB7501	PFMB7102	PFMB7202			
	Rated flow range*1	2 to 200 l/min	5 to 500 l/min	10 to 1000 l/min	20 to 2000 l/min			
Flow	Set point range	Instantaneous flow -10 to 210 l/min	-25 to 525 l/min	-50 to 1050 l/min	-100 to 2100 l/min			
	Smallest settable increment	Instantaneous flow 0 to 999,999,999,999 L	0 to 999,999,999,990 L					
	Accumulated volume per pulse (Pulse width = 50 ms)	1 l/min		10 L	10 L/pulse			
	Accumulated value hold function*3	Intervals of 2 or 5 minutes can be selected. The stored accumulated flow is held even when the power supply is OFF.						
	Power supply voltage	12 to 24 VDC ±10 %						
Electrical	Current consumption	25 mA or less						
	Protection	Polarity protection						
	Display accuracy	±0.5 % F.S. ± Minimum display unit (Ambient temperature of 25 °C)						
Accuracy	Analogue output accuracy	±0.5 % F.S. (Ambient temperature of 25 °C)						
	Repeatability	±0.1% F.S. ±1 digit						
	Temperature characteristics	±0.5 % F.S. (Ambient temperature: 0 to 50 °C, 25 °C standard)						
Switch output	Output type	Select from NPN or PNP open collector output.						
	Output mode	Select from Hysteresis, Window comparator, Accumulated output, Accumulated pulse output, Error output, or Switch output OFF modes.						
	Switch operation	Select from Normal or Reversed output.						
	Max. load current	80 mA						
	Max. applied voltage (NPN only)	30 VDC						
	Internal voltage drop (Residual voltage)	NPN output: 1 V or less (at load current of 80 mA), PNP output: 1.5 V or less (at load current of 80 mA)						
	Response time*2	3 ms or less						
	Delay time*2	Select from 0.00, 0.05 to 0.1 s (increment of 0.01 s), 0.1 to 1.0 s (increment of 0.1 s), 1 to 10 s (increment of 1 s), 20 s, 30 s, 40 s, 50 s, or 60 s						
	Hysteresis*4	Variable from 0						
Analogue output*5	Protection	Short circuit protection						
	Output type	Voltage output: 1 to 5 V, 0 to 10 V (only when the power supply voltage is 24 VDC) Current output: 4 to 20 mA (0 l/min to maximum value of the rated flow)						
	Impedance	Voltage output	Output impedance: 1 kΩ					
		Current output	Maximum load impedance: 300 Ω (at power supply voltage of 12 V), 600 Ω (at power supply voltage of 24 VDC)					
External input*6	Response time*2	50 ms or less						
	External input	Input voltage: 0.4 V or less (Reed or Solid state) for 30 ms or longer						
	Input mode	Select from Accumulated value external reset or Peak/Bottom value reset.						
Sensor input	Input type	Voltage input: 1 to 5 VDC (Input impedance: 1 MΩ), Current input: 4 to 20 mA DC (Input impedance: 51 Ω) (0 l/min to maximum value of the rated flow)						
	Connection method	Connector (e-CON)						
	Protection	Over voltage protection (Up to 26.4 VDC)						
Display	Display mode	Select from Instantaneous flow or Accumulated flow.						
	Unit*7	Instantaneous flow	l/min, cfm (ft³/min)					
		Accumulated flow	L, ft³, L × 10⁶, ft³ × 10⁶					
	Display range	Instantaneous flow Accumulated flow*9	-10 to 210 l/min 0 to 999,999,999,999 L	-25 to 525 l/min 0 to 999,999,999,990 L	-50 to 1050 l/min -100 to 2100 l/min			
	Minimum display unit	Instantaneous flow Accumulated flow	1 l/min					
	Display type	LCD						
	Number of displays	3-screen display (Main screen, Sub screen)						
	Display colour	1) Main screen: Red/Green, 2) Sub screen: Orange						
	Number of display digits	1) Main screen: 5 digits (7 segments), 2) Sub screen: 9 digits (7 segments)						
	Indicator LED	LED ON when switch output is ON OUT1/2: Orange						
Digital filter*8	Select from 0.00, 0.05 to 0.1 s (increment of 0.01 s), 0.1 to 1.0 s (increment of 0.1 s), 1 to 10 s (increment of 1 s), 20 s, or 30 s							
Environment	Enclosure	IP40						
	Withstand voltage	1000 VAC for 1 minute between terminals and housing						
	Insulation resistance	50 MΩ or more (500 VDC measured via megohmmeter) between terminals and housing						
	Operating temperature range	Operating: 0 to 50 °C, Stored: -10 to 60 °C (No condensation or freezing)						
	Operating humidity range	Operating/Stored: 35 to 85 % RH (No condensation or freezing)						
Standards		CE marking (EMC directive/RoHS directive)						
Weight	Body	25 g (Excluding the power supply/output connection lead wire)						
	Lead wire with connector	+39 g						

\*1 Rated flow range of the applicable flow switch

\*2 Value without digital filter (at 0.00 s)

\*3 When using the accumulated value hold function, use the operating conditions to calculate the product life, and do not exceed it. The maximum access limit of the memory device is 1.5 million times. If the product is operated 24 hours per day, the product life will be as follows:

- 5 min interval: life is calculated as 5 min x 1.5 million = 7.5 million min = 14.3 years
- 2 min interval: life is calculated as 2 min x 1.5 million = 3 million min = 5.7 years

If the accumulated value external reset is repeatedly used, the product life will be shorter than the calculated life.

\*4 If the flow fluctuates around the set value, the width for setting more than the fluctuating width needs to be set. Otherwise, chattering will occur.

\*5 Setting is only possible for models with analogue output.

\*6 Setting is only possible for models with external input.

\*7 Setting is only possible for models with the units selection function.

\*8 The response time indicates when the set value is 90 % in relation to the step input.

\*9 The accumulated flow display is the upper 6-digit and lower 6-digit (total of 12 digits) display. When the upper digits are displayed,  $\times 10^6$  lights up.

\* Products with tiny scratches, marks, or display colour or brightness variations which do not affect the performance of the product are verified as conforming products.

# PFMB Series

## Function Details

### ■ Output operation

The output operation can be selected from the following:  
Output (hysteresis mode and window comparator mode) corresponding to instantaneous flow or output (accumulated output and pulse output) corresponding to accumulated flow.  
(Default setting: Hysteresis mode, Normal output)

### ■ Display colour

The display colour can be selected for each output condition. The selection of the display colour provides visual identification of abnormal values. (The display colour depends on OUT1 setting.)

Green for ON, Red for OFF
Red for ON, Green for OFF
Red all the time
Green all the time

### ■ Reference condition

The display unit can be selected from standard condition or normal condition.

Standard condition: Flow rate converted to a volume at 20 °C and 1 atm (atmosphere)
Normal condition: Flow rate converted to a volume at 0 °C and 1 atm (atmosphere)

### ■ Display mode

The display mode can be selected from instantaneous flow or accumulated flow.

Instantaneous flow display
Accumulated flow display

### ■ Response time

The response time can be selected to suit the application. (Default setting: 1 s) Abnormalities can be detected more quickly by setting the response time to 0.05 seconds. The effect of fluctuation and flickering of the display can be reduced by setting the response time to 2 seconds.

0.05 s
0.1 s
0.5 s
1 s
2 s

### ■ Display OFF mode

This function will turn the display OFF. In this mode, decimal points flash on the main screen. If any button is pressed during this mode, the display reverts to normal for 30 seconds to allow checking of the flow, etc.

### ■ Setting of security code

The user can select whether a security code must be entered to release the key lock. At a time of shipment from the factory, it is set such that a security code is not required.

### ■ External input function

This function can be used only when the optional external input is present. The accumulated flow, peak value, and bottom value can be reset remotely.

**Accumulated value external reset:** A function to reset the accumulated flow value when an external input signal is applied.

In accumulated increment mode, the accumulated value will reset to and increase from zero.

In accumulated decrement mode, the accumulated value will reset to and decrease from the set value.

\* When the accumulated value is stored to memory, every time the accumulated value external reset is activated, the memory (EEPROM) will be accessed. Take into consideration that the maximum number of times the memory can be accessed is 1 million times. The total number of external inputs and the accumulated value memorising time interval should not exceed 1 million times.

**Peak/Bottom value reset:** Peak and bottom value are reset.

### ■ Forced output function

The output is turned on/off in a fixed state when starting the system or during maintenance. This enables confirmation of wiring and prevents system errors due to unexpected output.

For the analogue output type, when ON the output will be 5 V or 20 mA, and when OFF, it will be 1 V or 4 mA.

\* Also, an increase or decrease of the flow and temperature will not change the on/off status of the output while the forced output function is activated.

### ■ Accumulated value hold

The accumulated value is not cleared even when the power supply is turned off. The accumulated value is memorised every 2 or 5 minutes during measurement and continues from the last memorised value when the power supply is turned on again.

The life time of the memory device is 1 million access times. Take this into consideration before using this function.

### ■ Peak/Bottom value display

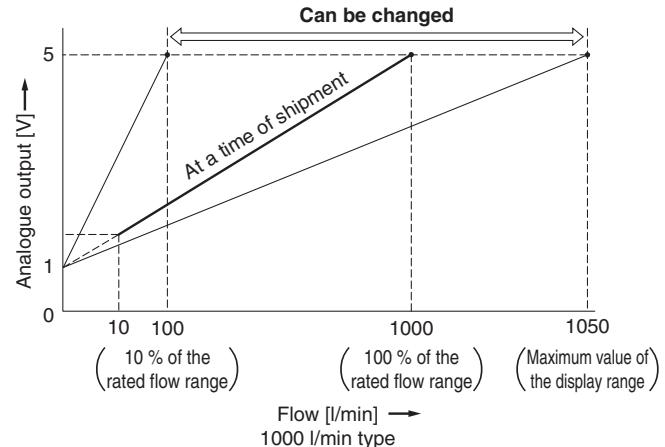

The maximum (minimum) flow rate is detected and updated from when the power supply is turned on. In peak (bottom) value display mode, this maximum (minimum) flow rate is displayed.

### ■ Keylock function

Prevents operation errors such as accidentally changing setting values

### ■ Analogue output free range function

This function allows a flow that generates an output of 5 V or 20 mA to be changed. The value can be changed between 10 % of the maximum value of the rated flow and the maximum value of the display range.

### ■ Reversible display mode

When the switch is used upside down, the orientation of the display can be rotated to make it easier to read by using the reversible display function.

When display is upside down.

Reversible display function

### ■ Reset to the default settings

The product can be returned to its factory default settings.

# PFMB Series

## ■ Error display function

When an error or abnormality arises, the location and contents are displayed.

Display	Error name	Description	Action
Er 1	OUT1 over current error	A load current of 80 mA or more is applied to the switch output (OUT1).	Eliminate the cause of the over current by turning off the power supply and then turning it on again.
Er 2	OUT2 over current error	A load current of 80 mA or more is applied to the switch output (OUT2).	
HHH	Instantaneous flow error	The flow rate exceeds the maximum value of the display range.	Decrease the flow rate.
LLL	Reverse flow error	There is a reverse flow equivalent to -5 % or more.	Change the flow to the correct direction.
999999999 ("999" will flash in any of upper, middle, lower 3-digit displays.)	PFMB7201 PFMB7501 PFMB7102	Accumulated flow error	The flow rate exceeds the accumulated flow rate range. Clear the accumulated flow rate.
Er 0	System error	Internal data error	Turn the power off and then on again.
Er 4			
Er 6			
Er 8			

If the error cannot be solved after the instructions above are performed, please contact SMC for investigation.

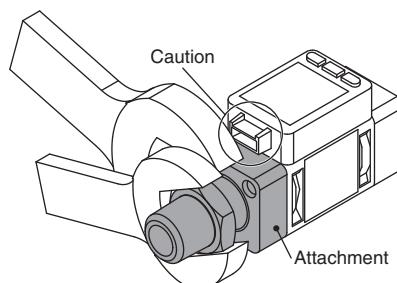

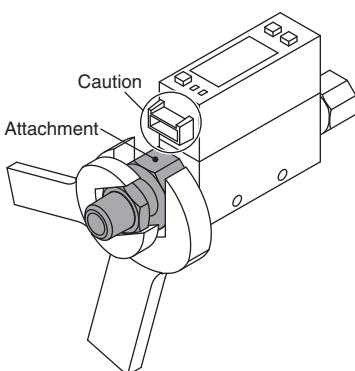

## ⚠ Precautions on piping

### Piping for the metal attachment

- Tighten to the specified torque. Refer to the table below for the required torque values.
- Use a wrench suited for the required torque. Do not use an extremely large wrench (Total length of 40 cm or more).
- If the tightening torque is exceeded, the product can be broken.
- If the tightening torque is insufficient, the fitting may become loose.
- Avoid any sealant tape getting inside the flow path.
- Ensure there is no leakage after piping.
- When mounting the fitting, a wrench should be used on the metal part (attachment) of the fitting only.

Holding other parts of the product with a wrench may damage the product.

Specifically, make sure that the wrench does not damage the connector.

Model	Required torque
<b>PFMB7201</b>	12 to 14 N·m
<b>PFMB7501</b>	28 to 30 N·m
<b>PFMB7102</b>	
<b>PFMB7202</b>	

Model	Nominal thread size	Width across flats of attachment
<b>PFMB7201</b>	Rc1/4, NPT1/4	17 mm
	G1/4	21 mm
<b>PFMB7501</b>	1/2	30 mm
<b>PFMB7102</b>		
<b>PFMB7202</b>	3/4	35 mm

# PFG300 Series

## Function Details

### ■ Output operation

The output operation can be selected from the following:  
 Output (hysteresis mode and window comparator mode) corresponding to instantaneous flow or output (accumulated output and pulse output) corresponding to accumulated flow.  
 (Default setting: Hysteresis mode, Normal output)

### ■ Simple setting mode

Only the set values for instantaneous flow and accumulated flow can be changed. Output mode, output type, display colour, and accumulate pulse output cannot be changed.

### ■ Display colour

The display colour can be selected for each output condition. The selection of the display colour provides visual identification of abnormal values.

Green for ON, Red for OFF
Red for ON, Green for OFF
Red all the time
Green all the time

### ■ Delay time setting

The time from when the instantaneous flow reaches the set value to when the switch output operates can be set. Setting the delay time can prevent the switch output from chattering.

(Default setting: 0 s)

0.00 s
0.05 to 0.1 s (increment of 0.01 s)
0.1 to 1.0 s (increment of 0.1 s)
1 to 10 s (increment of 1 s)
20 s
30 s
40 s
50 s
60 s

### ■ Digital filter setting

The time for the digital filter can be set to the sensor input. Setting the digital filter can reduce chattering of the switch output and flickering of the analogue output and the display.

The response time indicates when the set value is 90 % in relation to the step input.

(Default setting: 0 s)

0.00 s
0.05 to 0.1 s (increment of 0.01 s)
0.1 to 1.0 s (increment of 0.1 s)
1 to 10 s (increment of 1 s)
20 s
30 s

### ■ FUNC output switching function

Analogue output, external input, or copy function can be selected.  
 (Default setting: Analogue output)

### ■ Selectable analogue output function

1 to 5 V or 0 to 10 V can be selected for the analogue voltage output type. (Default setting: 1 to 5 V)

### ■ External input function

The accumulated flow, peak value, and bottom value can be reset remotely.  
**Accumulated value external reset:** A function to reset the accumulated flow value when an external input signal is applied.

In accumulated increment mode, the accumulated value will reset to and increase from zero.

In accumulated decrement mode, the accumulated value will reset to and decrease from the set value.

\* When the accumulated value is stored to memory, every time the accumulated value external reset is activated, the memory will be accessed. Take into consideration that the maximum number of times the memory can be accessed is 1.5 million times. The total number of external inputs and the accumulated value memorising time interval should not exceed 1.5 million times.

**Peak/Bottom value reset:** Peak and bottom value are reset.

### ■ Forced output function

The output is turned on/off in a fixed state when starting the system or during maintenance. This enables the confirmation of wiring and prevents system errors due to unexpected output.

For the analogue output type: When ON, the output will be 5 V (or 10 V when 0 to 10 V is selected) or 20 mA, and when OFF, 1 V (or 0 V when 0 to 10 V is selected) or 4 mA.

\* Also, an increase or decrease of the flow will not change the on/off status of the output while the forced output function is activated.

### ■ Accumulated value hold

The accumulated value is not cleared even when the power supply is turned off. The accumulated value is memorised every 2 or 5 minutes during measurement and continues from the last memorised value when the power supply is turned on again.

The maximum writable limit of the memory device is 1.5 million times, which should be taken into consideration.

### ■ Peak/Bottom value display

The maximum (minimum) flow rate is detected and updated from when the power supply is turned on. In peak (bottom) value display mode, this maximum (minimum) flow rate is displayed.

### ■ Setting of security code

The user can select whether a security code must be entered to release the key lock. At a time of shipment from the factory, it is set such that a security code is not required.

### ■ Keylock function

Prevents operation errors such as accidentally changing setting values

### ■ Reset to the default settings

The product can be returned to its factory default settings.

### ■ Display with zero cut-off setting

When the flow is close to 0 l/min, the product will round the value down and zero will be displayed. A flow value may be displayed even when the flow rate is 0 l/min due to high pressure or depending on the installation. The zero cut function will force the display to zero. The range to display zero can be changed.

# PFG300 Series

## ■ Selection of display on sub screen

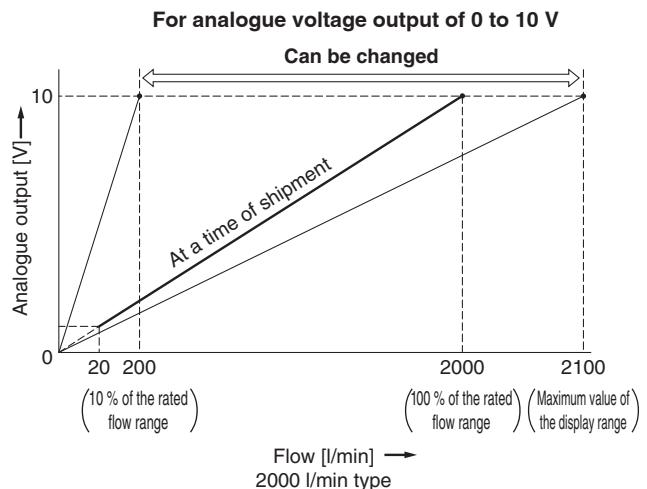

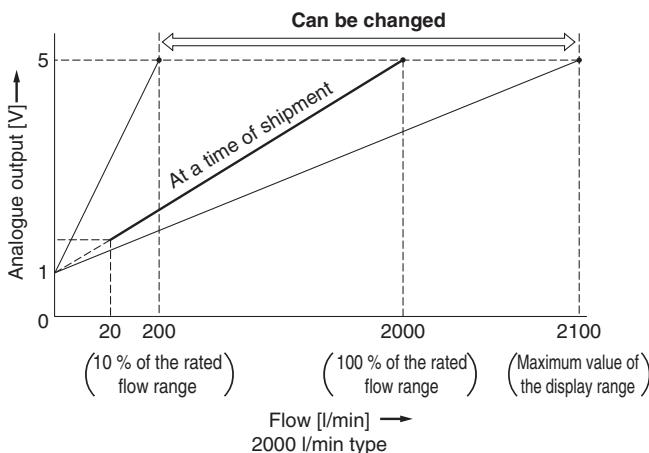

The display on the sub screen in measuring mode can be set.

Set value display	Accumulated value display	Peak value display
Displays the set value	Displays the accumulated value	Displays the peak value
Bottom value display	Line name display	OFF
Displays the bottom value	Displays the line name (Up to 5 alphanumeric characters can be input.)	Displays nothing

## ■ Analogue output free range function

This function allows a flow that generates an output of 5 V (or 10 V when 0 to 10 V is selected) or 20 mA to be changed. The value can be changed between 10 % of the maximum value of the rated flow and the maximum value of the display range.

## ■ Error display function

When an error or abnormality arises, the location and contents are displayed.

Display	Error name	Description	Action
<i>Er 1</i> <i>Er 2</i>	OUT over current error	A load current of 80 mA or more is applied to the switch output (OUT).	Eliminate the cause of the over current by turning off the power supply and then turning it on again.
<i>HHH</i>	Instantaneous flow error	The flow rate exceeds the maximum value of the display range.	Decrease the flow rate.
<i>LLL</i>	Reverse flow error	There is a reverse flow equivalent to -5 % or more.	Change the flow to the correct direction.
<i>999999</i> flashes $\times 10^6$	Accumulated flow error	The flow rate exceeds the accumulated flow rate range.	Clear the accumulated flow rate.
<i>Er 0</i> <i>Er 4</i> <i>Er 5</i> <i>Er 7</i> <i>Er 8</i> <i>Er 14</i> <i>Er 40</i>	System error	Internal data error	Turn the power off and then on again.
<i>Er 13</i>			
	Copy error	The copy function does not operate properly.	After clearing the error by pressing the  and  buttons simultaneously for a minimum of 1 second, check the wiring and the model, and then attempt to copy again.

If the error cannot be solved after the instructions above are performed, please contact SMC for investigation.

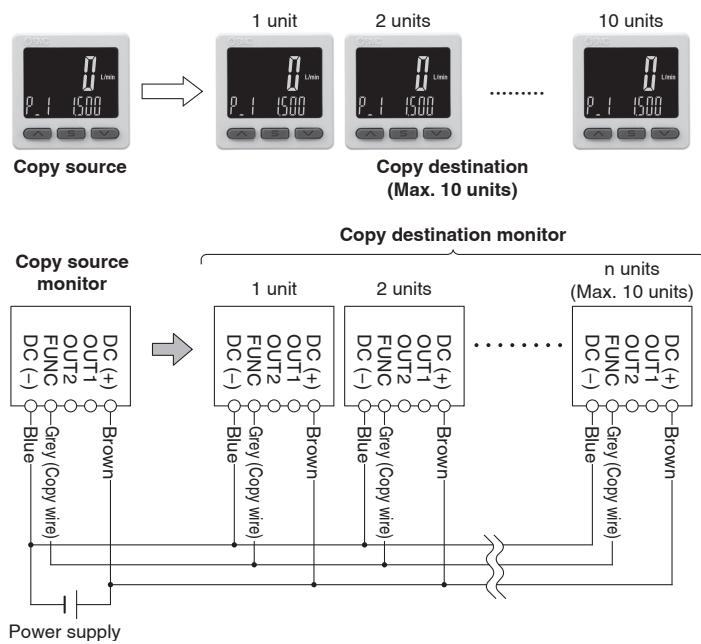

### ■ Copy function

The set values of the monitor can be copied.

This can reduce setting labour and minimize the risk of setting mistakes.

**The set value can be copied to up to 10 flow monitors simultaneously.**

(Maximum transmission distance: 4 m)

- 1) Wire as shown in the figure on the left.
- 2) All monitors are set to copy destination when first purchased. (Default condition is the monitor to be copied to.)
- 3) Press the **S** button on the monitor to start copying.

### ■ Selection of power saving mode

Power saving mode can be selected.

It shifts to the power saving mode without button operation for 30 seconds.

It is set to the normal mode (Power saving mode is OFF.) at a time of shipment from the factory.

(During power saving mode, [ECo] will flash in the sub screen and the operation light is ON (only when the switch is ON).)

\* There may be a difference in the displayed value on the connected flow switch and the flow monitor. When the flow monitor display is being used, it is recommended to set the flow switch display to OFF mode.

## Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “**Caution**,” “**Warning**” or “**Danger**.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)<sup>1)</sup>, and other safety regulations.

### **Danger:**

**Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

### **Warning:**

**Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

### **Caution:**

**Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

- 1) ISO 4414: Pneumatic fluid power – General rules and safety requirements for systems and their components.
- ISO 4413: Hydraulic fluid power – General rules and safety requirements for systems and their components.
- IEC 60204-1: Safety of machinery – Electrical equipment of machines.  
(Part 1: General requirements)
- ISO 10218-1: Robots and robotic devices - Safety requirements for industrial robots - Part 1: Robots.
- etc.

## Warning

### **1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.**

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

### **2. Only personnel with appropriate training should operate machinery and equipment.**

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

### **3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.**

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

### **4. Our products cannot be used beyond their specifications.**

**Our products are not developed, designed, and manufactured to be used under the following conditions or environments.**

**Use under such conditions or environments is not covered.**

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Use for nuclear power, railways, aviation, space equipment, ships, vehicles, military application, equipment affecting human life, body, and property, fuel equipment, entertainment equipment, emergency shut-off circuits, press clutches, brake circuits, safety equipment, etc., and use for applications that do not conform to standard specifications such as catalogues and operation manuals.
3. Use for interlock circuits, except for use with double interlock such as installing a mechanical protection function in case of failure. Please periodically inspect the product to confirm that the product is operating properly.

## Caution

**We develop, design, and manufacture our products to be used for automatic control equipment, and provide them for peaceful use in manufacturing industries.**

**Use in non-manufacturing industries is not covered.**

Products we manufacture and sell cannot be used for the purpose of transactions or certification specified in the Measurement Act.

The new Measurement Act prohibits use of any unit other than SI units in Japan.

## Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”. Read and accept them before using the product.

### Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.<sup>2)</sup> Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.
- 2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

### Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

## Safety Instructions

Be sure to read “Handling Precautions for SMC Products” (M-E03-3) before using.
