- Suitable for Pozidriv
- Impaktor technology for above-average service life
- Particularly suitable for use with customary impact drivers
- Diamond coating for a secure fit in the screw, literally bites into the screwhead to prevent cam-out
- Take it easy tool finder: colour coding according to profile and size

High quality bits for Pozidriv\* screws. The Impaktor technology offers an above-average service life even under extreme circumstances. Enhanced friction resistance, thanks to the rough diamond-particle coating on the bit tip, prevents any slipping out of the screw head. Particularly suitable for use with customary impact drivers. 1/4" hexagon, suitable for holders as per DIN ISO 1173-D 6.3. \* Pozidriv = registered trademark of European Industrial Service Ltd.

### Impaktor-Bits

Impaktor technology for an above-average service life even under extreme demands

For an above-average service life. Maximum utilisation of the material properties, a very special geometry – designed particularly to meet the extreme demands – as well as a specific manufacturing process mean that Wera Impaktor tools have an above-average service life. Another product advantage is the coating of the Impaktor bits with minute diamond particles. These diamond particles reduce the cam-out effects – particularly high in power tool applications – which can lead to a slipping out of the screw head. The diamond particles literally bite themselves into the screw recess. This means that less contact pressure is required, something that greatly delays fatigue setting-in in power tool screwdriving jobs.

### Improved productivity

For use with impact screwdrivers. Improve productivity when screwdriving with power tools.

### Above-average service life

Maximum utilisation of the material properties, a very special geometry – designed particularly to meet the extreme demands – as well as a specific manufacturing process mean that Wera Impaktor tools have an above-average service life.

### Reduced danger of bit breakage.

Particularly high strength. Reduce the danger of premature bit breakage.

### Torsion zone

Torsion zone specially designed to absorb such forces and thereby protect the bit tip.

### Reduced contact pressure

These diamond particles reduce the cam-out effects – particularly high in power tool applications – which can lead to a slipping out of the screw head. The diamond particles literally bite themselves into the screw recess. This means that less contact pressure is required, something that greatly delays fatigue setting-in in power tool screwdriving jobs.

### “Take it easy” tool finder

“Take it easy” tool finder with colour coding according to profiles and size stamp – for simple and rapid accessing of the required tool.
