|--------------------------------|--|--|--|
| Product Description            | 3M <sup>TM</sup> Scotch-Weld <sup>TM</sup> Super 77 <sup>TM</sup> Cylinder Spray Adhesives is an industrial grade, versatile bulk mist spray adhesive designed for lightweight applications. Formulated with high tack, high coverage, fast drying and long bonding range. The adhesive is packaged in convenient, portable, no maintenance aerosol cylinders. |  |  |
| Key Features                   | <ul> <li>High solids, high coverage adhesive.</li> <li>Fast drying formulas with aggressive tack to</li> <li>Uniform mist spray pattern, very low soak i</li> <li>Good heat and moisture resistance to help p</li> <li>Temporary and permanent lightweight bond<br/>fabrics, foams, wood, metal, glass and most</li> </ul>                                     | n.<br>rotect bonds.<br>Is on substrates like p | -  |

# Available Sizes and Expected Coverage

| Cylinder Size<br>Availability | Cylinder Adhesive<br>Net. Wt. (Ibs.): |     | Sq. Ft. Coverage @<br>0.5 g./sq. ft. (dry wt.): | Sq. Ft. Coverage @ 1<br>g./sq. ft. (dry wt.): |
|-------------------------------|---------------------------------------|-----|---|---|
| Large - Disposable            | 29.3                                  | 249 | 7,290   | 3,645   |

| Handling/Application<br>Information | Surface Preparation:<br>For best results, all surfaces to be bonded must be clean, dry, and free from dirt, dust, oil, loose paint, wax or grease, etc.   |
|-------------------------------------|---|
|                                     | Application Temperature:<br>For best results, the temperature of the adhesive and the surfaces being bonded should<br>be between 60°-80°F (16°-27°C). Temperature outside this range may affect bonding<br>range and sprayability.  |
|                                     | <b>Equipment Setup:</b><br>Attach the larger flare fitting end to the spray applicator and tighten the nut securely.<br>Check to see that the applicator gun trigger stop/adjusting nut is fully locked against<br>the trigger. Attach the other end of the hose, a smaller flare fitting, to the cylinder<br>valve and tighten securely.   |
|                                     | <ul> <li>Directions For Use:</li> <li>1.) Slowly open the cylinder valve and inspect the connections for any leaks. Tighten if needed.</li> <li>2.) Fully open the valve.</li> </ul>  |
|                                     | <ul> <li>3.) Unscrew the trigger stop/adjusting nut away from the trigger 3-4 turns and spray a test pattern. For more adhesive output, continue to screw the nut away from the trigger. For less adhesive output, screw the nut back towards the trigger.</li> <li>4.) Hold the applicator 3-10 inches away from the surface to be sprayed and apply a uniform coat of adhesive. (The smaller the spray pattern chosen in step 3, the closer the applicator gun will need to be to the surface and vice versa for larger patterns.)</li> </ul> |
|                                     | <ul><li>5.) Apply 1-3 even coats of adhesive. (This will depend on the needed coverage for the bonding application.)</li><li>6.) Allow adhesive to dry until tacky and then apply sufficient pressure to ensure</li></ul>   |
|                                     | <ul> <li>complete contact.</li> <li>Note: Test the tackiness by gently touching the adhesive with your knuckle. If the adhesive transfers to your skin, it is too wet. If the adhesive is aggressively tacky and does not transfer to your skin, it is ready to bond. If the adhesive is too dry or only has a very light tack, it is too dry and another coat of adhesive should be applied to at least one of the surfaces.</li> </ul>  |

| Handling/Application       |   |  |  |
|----------------------------|---|--|--|
| Information<br>(continued) | Dry Time (minutes):   | <1   |  |
|                            | Open Time (minutes):  | 10 seconds to 15 seconds (one surface bonding)<br>1-30 minutes (two surface bonding)                                     |  |
|                            | <b>One Surface Bonding:</b> Less demanding applications. Spray the more non-porous surface and bond within Open Time (see Open Times in above table). |  |  |
|                            | 0   | Permanent, more demanding applications. Spray both surfaces me (see Open Times in above table).                          |  |
|                            |   | For storage – screw the trigger stop/adjusting nut all the way n. Turn the valve on the cylinder to the closed position. |  |

| Spray Pattern (inches):<br>(see *Note below) | 2-6                   | 3-8                   | 5-12                  | 1-4             | 3-8                               |
| Applications                                 | General<br>Laminating | General<br>Laminating | General<br>Laminating | Edge<br>banding | Restricted<br>output<br>(General) |

\*Note: Spray pattern widths will vary between products, due to formulation and pressure differences.

**Spray Pattern Adjustments:** Unscrew the trigger stop/adjusting nut away from the trigger 3-4 turns and spray a test pattern. For more adhesive output and a wider spray pattern, continue to unscrew the nut away from the trigger. For less output and smaller spray pattern, screw the adjusting nut back towards the trigger. Hold the applicator 3-10 inches away from the surfaces to be sprayed and apply a uniform coat of adhesive. (The smaller the spray pattern, the closer the applicator gun will need to be to the surface). The lace sprays form an elliptical pattern and should be sprayed at the patterns widest point. The pebble spray is more of a continuous triangular pattern that gets larger as you continue to move the applicator from the surface being sprayed.

#### Typical Adhesive Performance Characteristics

Note: The following technical information and data should be considered representative or typical only and should not be used for specification purposes.

**Overlap Shear Strength:** 1 square inch bonds tested at 2 inches per minute separation rate at 75°F (24°C). Results are reported in PSI – pounds per square inch.

|  | 3M™ Scotch-Weld™<br>Super 77™ Cylinder |
|--|--|
| Substrate Bonded   | Spray Adhesive                         |
| ABS to ABS (2 surface adhesive bond)                               | 165                                    |
| ABS to ABS (1 surface adhesive bond)                               | 132                                    |
| Acrylic to Acrylic (2 surface adhesive bond)                       | 158                                    |
| Aluminum to Aluminum (2 surface adhesive bond)                     | 142                                    |
| Birch to Birch (2 surface adhesive bond)                           | 215                                    |

| Super 77™ Cylinder |                     |
| Spray Adhesive     | Failure Temperature |
| 77:                | 190                 |

| Cold Weather Warning | How Cold Weather Affects Cylinders:   |  |  |
|----------------------|---|--|--|
|                      | 1.) The bulk adhesive in the cylinder will thicken as temperature gets colder.  |  |  |
|                      | 2.) The propellants used will decrease in pressure and, therefore effectiveness:  |  |  |
|                      | a. Liquefied hydrocarbon propellants will condense and reduce<br>the effective amount of available pressure on the cylinder. This<br>will adversely affect the spray pattern and, consequently, the<br>overall performance of the adhesive.   |  |  |
|                      | <ul> <li>b. Compressed gas propellants will shrink dramatically in cold<br/>weather causing the system to have much less available force<br/>to push a thicker bulk adhesive out. The effect will be<br/>improper, less controlled spray properties with longer dry times<br/>needed.</li> </ul>  |  |  |
|                      | How to Eliminate Cold Weather Problems:   |  |  |
|                      | <ol> <li>Store the cylinders in a controlled environment with temperatures between 60°-80°F (16°-27°C).</li> </ol>  |  |  |
|                      | 2.) Keep cylinders off of cold concrete floors and away from outside walls.   |  |  |
|                      | 3.) Use heat belts of blankets, approved for use with flammable adhesives, to control the temperature of the adhesives.   |  |  |
|                      | 4.) Allow additional time for solvents and propellants to flash off, when temperatures are below 60°F (16°C).   |  |  |
|                      | If Cylinders Get Too Cold:  |  |  |
|                      | If cylinders arrive cold or have been exposed to temperatures that are causing<br>poor spray properties, move to an area that is heated above 70°F (21°C). The<br>larger the cylinder, the longer it will take for the temperature to equilibrate.<br>Mini (~11 lb.) and Large (~30 lb.) cylinders can be shaken or submerged in hot<br>water to accelerate the warming process. Once the cylinders equilibrate back to<br>at least 60°F (16°C), the products will perform as normal. |  |  |

| Troubleshooting –<br>Applicator/Hose Clog | Applicator – Hose Clog Checklist for 3M <sup>TM</sup> Scotch-Weld <sup>TM</sup> Hi-Strength Cylinder Spray Adhesives.  |
|---|--|
|   | If the system sprays poorly or won't spray at all: The sequence below runs through a complete clog into the cylinder valve. If at any time during the sequence the problem is resolved, stop, clean the needed parts, put the system back together, and you are finished.  |
|   | 1. Make sure the cylinder is not empty.  |
|   | 2. Make sure the cylinder valve is open.   |
|   | <ol> <li>Close the applicator trigger stop adjusting nut and clean the nozzle tip.<br/>(Does it spray now?)</li> </ol>   |
|   | 4. Take off the nozzle and try spraying (Does it spray now?) Clean the nozzle.   |
|   | 5. Shut off the cylinder valve, CAREFULLY and SLOWLY – loosen the applicator gun/hose connection and look for adhesive to squirt out. If adhesive starts to leak out, allow it to slowly continue to do so until it stops. (This will be a little messy, but you will need to bleed off the pressurized adhesive to clean the applicator gun.) The applicator gun has a clog at the valve, stem or inlet area and needs to be cleaned. |
|   | 6. If nothing leaks out after fully loosening the applicator gun,<br>CAREFULLY remove applicator gun, realizing that the hose may be<br>clogged but could be full of adhesive and pressure depending on where<br>the clog is. (Secure the open end of the hose into a bucket in case the clog<br>releases and the system flushes.)   |
|   | 7. CAREFULLY and SLOWLY loosen the hose connection at the cylinder valve. Look for adhesive to squirt out. If adhesive starts to leak out, allow it to slowly continue to do so until it stops. (This will be a little messy, but you will need to bleed off the pressurized adhesive in the hose.) Clean or replace the hose.   |
|   | 8. With everything now isolated from the cylinder, place a bucket in front of the cylinder valve and slowly open it to see if any adhesive comes out. If it does, put the cleaned system parts back together. If it does not, there is something wrong with the cylinder or cylinder valve and it should be returned.  |
|   | Solvents that can be used for cleaning the nozzle, applicator gun and inside of hose: 3M <sup>TM</sup> Adhesive Remover, Cyclohexane, Toluene, MEK.*   |
|   | *Note: When using solvents, extinguish all ignition sources, including pilot lights,   |

and follow the manufacturer's precautions and directions for use.

| Storage                        | Store product at 60°-80°F (16°-27°C) for maximum storage life. Higher temperatures reduce normal storage life. Lower temperatures may cause increased viscosity of a temporary nature. Rotate stock on a "first in-first out" basis.   |
|--------------------------------|--|
| Shelf Life                     | When stored at the recommended conditions in the original, unopened container, this product has a shelf life of 15 months from date of shipment.   |
| Precautionary<br>Information   | Refer to Product Label and Material Safety Data Sheet for health and safety information before using this product. For additional health and safety information, call 1-800-364-3577 or (651)-737-6501.  |
| Product Use                    | All statements, technical information and recommendations contained in this document are based upon tests or experience that 3M believes are reliable. However, many factors beyond 3M's control can affect the use and performance of a 3M product in a particular application, including the conditions under which the product is used and the time and environmental conditions in which the product is expected to perform. Since these factors are uniquely within the user's knowledge and control, it is essential that the user evaluate the 3M product to determine whether it is fit for a particular purpose and suitable for the user's method of application.  |
| Warranty and<br>Limited Remedy | Unless stated otherwise in 3M's product literature, packaging inserts or product packaging for individual products, 3M warrants that each 3M product meets the applicable specifications at the time 3M ships the product. Individual products may have additional or different warranties as stated on product literature, package inserts or product packages. 3M MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ANY IMPLIED WARRANTY ARISING OUT OF A COURSE OF DEALING, CUSTOM OR USAGE OF TRADE. User is responsible for determining whether the 3M product is fit for a particular purpose and suitable for user's application. If the 3M product is defective within the warranty period, your exclusive remedy and 3M's and seller's sole obligation will be, at 3M's option, to replace the product or refund the purchase price. |
| Limitation of Liability        | Except where prohibited by law, 3M and seller will not be liable for any loss or damage arising from the 3M product, whether direct, indirect, special, incidental or consequential, regardless of the legal theory asserted, including warranty, contract, negligence or strict liability.  |

This Industrial Adhesives and Tapes Division product was manufactured under a 3M-quality system registered to ISO 9001:2000 standards.
