Description

The so-called "standard EURO" stacking container meet dimensional requirements for optimized stacking and storage. They are interchangeable, fit together perfectly and are adapted to the dimensions of European pallets (80x120 cm). They allow a homogenization of the load, and thus stability and safety during operations of preparation, storage or products transportation. Stacking container are light, reinforced, resistant to shocks, cold, heat, and common acids and chemicals. The interior (bottom and sides) is smooth for easy cleaning while optimizing the storage of products in the stacking container.

Applications

Operation of **preparation**, **storage** or products **transportation**
