Burst pr		4.9 MPa	6.9 MPa	4.7 MPa	3.6MPa	2.9 MPa	2.6 MPa	6.4 MPa	9.9 MPa	6.7 MPa	7.9 MPa	6.7 MPa	4.6 MPa	2.8 MPa	2.0 MPa
Min. ben		2	0	40	65	110	160	12	6	2	20	30	60	160	290
Max. operating temperature (Fixed use)		260°C													
Material	,	Super PFA													

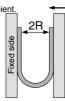

Note 1) • The maximum operating pressure is the value at 20°C. For other temperatures, calculate from the burst pressure drop coefficient Furthermore, an abnormal temperature increase due to adiabatic compression can cause tubing to burst. To operate at a temperature other than 20°C, the operating pressure must be no more than the value calculated using the

equation below: When the value (calculated using the formula below) exceeds 1 MPa, the Max. operating pressure is 1 MPa. (Max. operating pressure) = 1/4 x (burst pressure drop coefficient) x (burst pressure at 20°C)

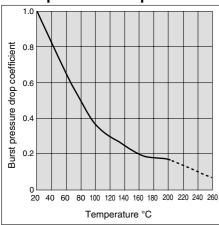

• When using a fluid in liquid form, the surge pressure must be no more than the maximum operating pressure A surge pressure higher than the maximum operating pressure can cause breakage of the fitting or bursting of the tubing. Note 2) The minimum bending radius is measured using the method shown in the figure at the right.

Note 3) It is connectable with LQ Series (3/4"size). As for other commercial items, there are some cases it is not able to connect due to tolerance of dimensions.

At a temperature of 20°C bend the tubing into a U shape. Then with one side fixed, gradually close the other side and measure 2R at the point where the tubing folds or flattens, etc.

#### **Burst pressure drop curve**

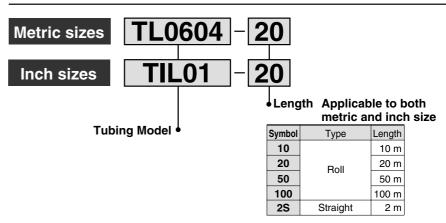

#### Eluting fluorine ion amount (µg/g)

Type	Fluorine ion			
Eluting amount	0.1 or less			

A 15 g piece of fluororesin tubing is cut off, washed in deionized water and immersed in 15 ml of 25% methyl alcohol extract at room temperature for 24 hours. Then the extract is diluted with deionized water to be subjected to a quantitative analysis of fluorine ions.

#### **How to Order**

### Fluting metal ion amount

Elating metal for amount (ng/cm²)								
Туре	Al	Fe	Ni	Na	Ca			
Eluting amount	4.5	0.3	0.2	7.1	1.3			

The interior of the fluororesin tubing is washed with super deionized water. Approximately 20g of super high purity hydrofluoric acid (48%) is measured and injected into the tubing. The interior wall of the tubing is immersed at normal temperature for one week with both ends of the tubing plugged.

Then the extract was diluted with super deionized water to be subjected to a Note 4) Figures shown in tables are representative quantitative analysis on Al, Fe, Ni, Na and Ca by the stripping method

#### Length Applicable to inch size only

Symbol	Туре	Length
16	Roll	50 Ft. (16 m)
33	HOII	100 Ft. (33 m)

Please refer to the "Series and Specifications" above, as the tubing length differs dependant

values, not guaranteed values.

# Material and fluid compatibility check list for high purity fluoropolymer fittings

The material and fluid compatibility check list provides reference values as a guide only. Note 1) Since static electricity may be generated, implement suitable countermeasures.

1	′		
ı	Table symbol	Can be use	÷C

- Compatibility is indicated for fluid temperatures of 200°C or less.
- The material and fluid compatibility check list provides reference values as a guide only, therefore we do not guarantee the application to our product.
- The data above is based on the information presented by the material manufacturers.
- SMC is not responsible for its accuracy and any damage happened because of this data.
