INDUSTRY SILICONE SEALANT Translucide neutral industry silicone sealant

item #	EAN	Product
		INDUSTRY SILICONE SEALANT
735940	3660338012846	Translucide neutral industry silicone
		sealant

Description

INDUSTRY SILICONE SEALANT is a neutral, high quality façade and glazing sealant.

Technical data

Polysiloxane
Stable paste
Moisture curing
Ca. 9 min
Ca. 2 mm/24h
Ca. 16 ± 5 Shore A
Ca. 1.01 g/ml
> 80 %
25 %
Ca. 1,20 N/mm²
Ca. 0,26 N/mm²
> 700 %
-60 °C → 150 °C
5 °C → 35 °C

^{*} These values may vary depending on environmental factors such as temperature, moisture, and type of substrates.

Application method

Application method: With a manual, pneumatic or accu caulking gun. Cleaning: Clean with White Spirit. immediately after use (before curing).

Finishing: With a soapy solution before skinning.

Repair: With the same material

Properties

- → Very easy to apply
- → Permanently elastic after curing
- → Very good adhesion on many materials
- → UV-resistant
- → Very good resistance to ageing
- → Very good moisture resistance
- → Neutral curing
- → MEKO free

Applications

- → All usual building joints with high movement.
- → Glazing and joint works.
- → Expansion joints between many different construction materials.
- → Sealing between PVC, treated wooden and metal profiles and glass

^{**}This information relates to fully cured product.

Spartex

TECHNICAL DATASHEET

Durée de stockage

15 months unopened and stored in dry and cool conditions (Between 5 and 25 °C)

Health- and Safety Recommendations

Take the usual labour hygiene into account. Consult label and material safety data sheet for more information.

Dangerous. Respect the precautions for use.

Packaging

Colour:

→ Transparent

Carton: 15 units

Palette: 1 500 units

Packaging: 300 ml cartridge.

Joint dimensions

Min. width for joints: 5 mm Max. width for joints: 30 mm Min. depth for joints: 5 mm

Recommendation sealing jobs: joint width = 2x joint depth..

Substrates

Substrates: all usual building substrates

Nature: rigid, clean, dry, free of dust and grease.

Surface preparation: Prepare nonporous surfaces with a cleaner.

There is no adhesion on PE, PP, PTFE (Teflon®) and bituminous substrates. We recommend a preliminary adhesion and compatibility test on every surface.

Remarks

- → Do not use on natural stones like marble, granite,...(staining).
- → Direct contact with the secondary sealing of insulating glass units (insulation) and the PVB-film of safety glass must be avoided.
- → The implementation of insulating glass and carpentry work must comply with the DTU39 and the recommendations made by the organizations SNJF and CEKAL.
- → A total absence of UV can cause a color change of the sealant.
- → In an acid environment or in a dark room, a white sealant can slightly turn yellow.

Under the influence of sunlight it will turn back to its initial colour.

→ When finished with a finishing solution or soapy solution, make sure that the surfaces are not touched by this solution.

This will cause the sealant not to adhere to that surface. Therefore we recommend to only dip the finishing tool in this solution.

- → We strongly recommend not to apply the Finishing Solution in full sunlight as it will dry very fast in these circumstances.
- → Do not use in applications where continuous water immersion is possible.
- \rightarrow Do not use on polycarbonate.
- → When using different reactive joint sealants, the first joint sealant must be completely hardened before the next one is applied.
- → Contact with bitumen, tar or other plasticizer releasing materials such as EPDM, neoprene, butyl, etc. is to be avoided since it can give rise to discolouration and loss of adhesion.
