Spanner wrenches

NSK spanner wrenches for locknuts

The NSK range of locknut spanners is designed for the safe installation and removal of locknut assemblies without the damage caused when other methods are used.

- › A simple and inexpensive means of installing locknuts for taper bore mounting
- › Suitable for shafts, taper and adapter sleeves
- › Positive location on the locknut, clamping into the slot ensures no damage to the locknut
- › Standard range made from thick steel plate
- › Impact range made with forged steel heads welded to alloy steel handles with easy grip rubber cover
- › Impact range designed with broad head to absorb heavy blows and impact forces from hammers
