CAT.EUS70-47Ba-UK

Electrical entry*

Solenoid valve type only

Grommet **DIN terminal Conduit terminal**

Conduit Flat terminal

Built-in full-wave rectifier type (AC specification)

- Improved durability
 Service life is extended by the special construction.
 (compared with current shading coil)
- Reduced apparent power (for normal temperature)

11 VA → **7** VA (Size 21, 22, 24, 25, 26, 27, 28)

18 VA → 10 VA (Size 23)

Noise reduction

Rectified to DC by a full-wave rectifier, resulting in a buzz noise reduction.

Solenoid Valve Type VXF2 Series

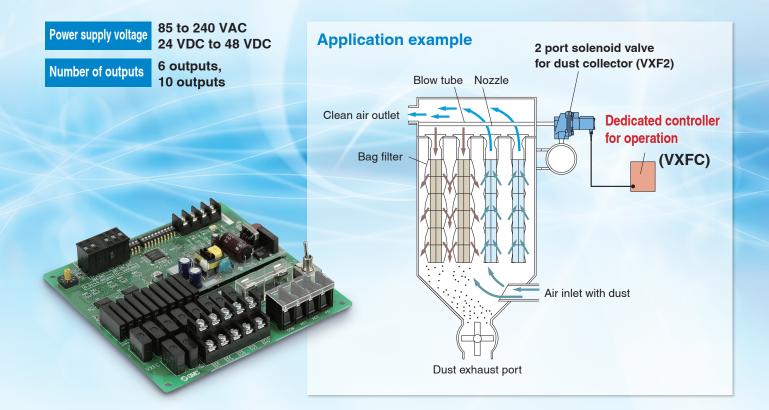

Air Operated Type **VXFA2** Series

The valve controller turns ON/OFF multiple valves for the dust controller.

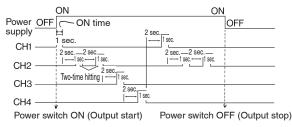

Two-time Hitting Function

A two-time hitting function is adopted to improve the bag filter dusting efficiency. Turn ON the DIP switch dual pulse (OFF for one-time hitting). (Effective up to the number of setting channels)

■Operation sequence diagram

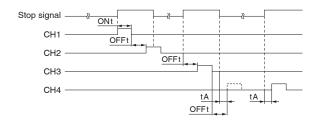

Interrupt Operation Function

Interrupting an operation from an external switch is possible using input signals.

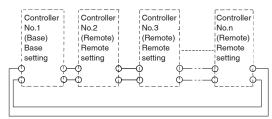

Operation sequence diagram

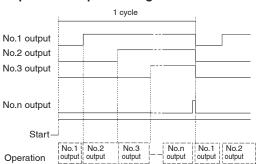

Cascade Connection (Multiple-board connection)

VXFC10: One board allows outputs at merely 10 output points max. But the points can be increased to 20 and 30 output points by connecting cascades.

■Connection

Operation sequence diagram

VXF2/VXFA2 Series Valve Characteristics

The valve characteristics data was measured with the stated outlet piping length. The valve characteristics vary depending on the tank capacity, air supply, set pressure, outlet conditions (nozzle size, quantity, piping length), so please use these values as a guideline.

1. Response Time, Start-up Speed

VXF2 Type

Measuring conditions

Test circuit Refer to the circuit below.

Test sample…VXF21A (Port size 3/4) VXF22A (Port size 1) VXF23A (Port size 1 1/2) VXF24A (Port size 2)

VXF25A, B (Port size 2 1/2) VXF26A, B, C, D (Port size 3) VXF27B (Port size 3 1/2) VXF28B (Port size 4)

Air tank capacity...VXF21 to VXF22: 100 L VXF23 to VXF24: 200 L VXF25 to VXF28: 1000 L

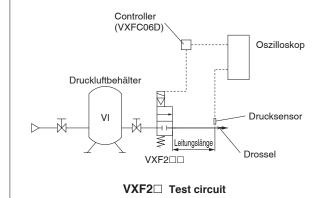

Energising time······150 msec
Rated voltage·····24 VDC
Outlet piping length·····500 mm

Thread size of outlet piping...VXF21: Rc3/8 VXF22: Rc1/2

VXF23: Rc3/4 VXF24: Rc1 VXF25: Rc1 1/2 VXF26: Rc2 VXF27: Rc2 1/2 VXF28: Rc3

How to calculate

- 1. Set the tank pressure to 0.5 MPa.
- 2. Close the stop valve on the inlet of the tank.
- Energise the valve and read the pressure wave on the outlet.

VXFA2 Type

Measuring conditions

Test circuit Refer to the circuit below.

Test sample ··· VXFA21A (Port size 3/4) VXFA22A (Port size 1)

VXFA23A (Port size 1 1/2) VXFA24A (Port size 2) VXFA25A, B (Port size 2 1/2) VXFA26A, B, C, D (Port size 3) VXFA27B (Port size 3 1/2) VXFA28B (Port size 4)

Air tank capacity...VXFA21 to VXFA22: 100 L VXFA23 to VXFA24: 200 L VXFA25 to VXFA28: 1000 L

Energising time ······150 msec

Pilot valve

VX232AA (Orifice, ø5, Rated voltage 24 VDC)

Piping length to the pilot valve

500 mm, 1000 mm, 1500 mm (Ø 10, t = 1.5)

Outlet piping length ····· 500 mm

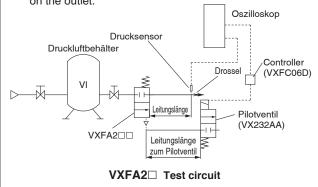

Thread size of outlet piping ··· VXFA21: Rc3/8 VXFA22: Rc1/2

VXFA23: Rc3/4 VXFA24: Rc1 VXFA25: Rc1 1/2VXFA26: Rc2 VXFA27: Rc2 1/2 VXFA28: Rc3

How to calculate

- 1. Set the tank pressure to 0.5 MPa.
- 2. Close the stop valve on the inlet of the tank.

Energise the pilot valve and read the pressure wave on the outlet.

ON response time

Time required until the valve is switched after it is energised (Time required until pressure is released to the outlet)

Start-up speed

Speed until the valve is switched after being energised and the pressure released to the outlet reaches 90 % of the peak pressure

Start-up speed = $(Pm \times 0.9)/\triangle t$ [MPa/msec]

Note) For air operated type, the longer the piping length to the pilot valve, the longer the ON response time will be. If the piping length is increase even more, the valve may not open due to piping capacity and resistance in the piping, so keep the piping length to the pilot valve as short as possible.

Verlauf der Spannung Druck-Wellenform im Behälter Wellenform des Ausgangsdrucks Ansprechzeit beim Einschalten 0 % Ansprechzeit beim Einschalten 0 %

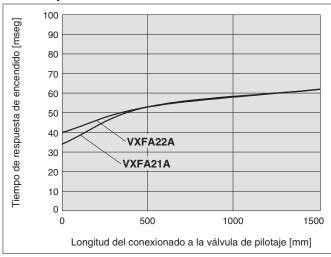

Valve Characteristics VXF2/VXFA2 Series

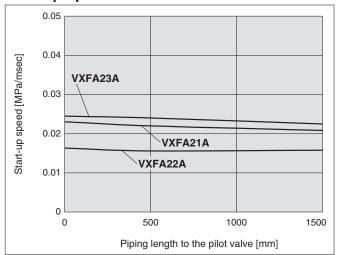

1. Response Time, Start-up Speed

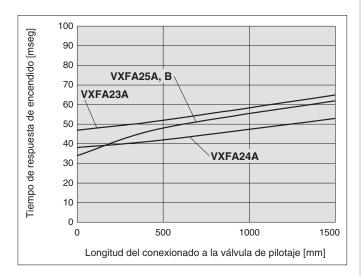

For VXF2/solenoid valve type, the piping length to the pilot valve should be 0 mm.

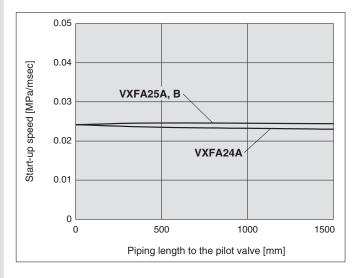

ON Response Time

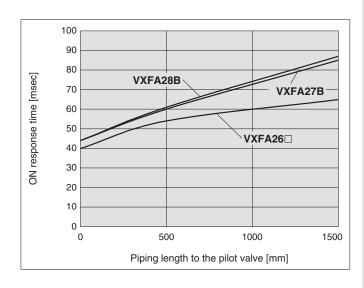

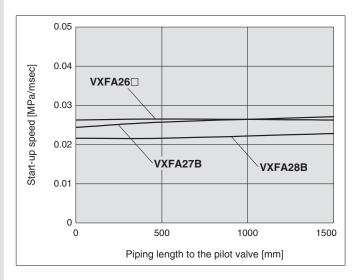

Start-up Speed

VXF2/VXFA2 Series

2. Discharge Volume

For VXF2/solenoid valve type, the piping length to the pilot valve should be 0 mm.

VXF2 Type

Measuring conditions

Test circuit Refer to the circuit below.

Test sample ··· VXF21A (Port size 3/4) VXF22A (Port size 1)

VXF23A (Port size 1 1/2) VXF24A (Port size 2) VXF25A, B (Port size 2 1/2) VXF26A, B, C, D (Port size 3) VXF27B (Port size 3 1/2) VXF28B (Port size 4)

Air tank capacity ··· VXF21 to VXF22: 100 L

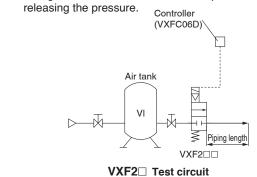

VXF23 to VXF24: 200 L VXF25 to VXF28: 1000 L

Energising time.....150 msec
Rated voltage.....24 VDC
Outlet piping length.....500 mm

Thread size of outlet piping.....Open

How to calculate

- 1. Set the tank pressure to 0.5 MPa.
- 2. Close the stop valve on the inlet of the tank.
- 3. Energise the valve and read the tank pressure after

Discharge volume: Valve discharge volume per energising time

Conversion of the discharge volume

Calculate the discharge volume by reading the tank pressure after the valve starts the operation.

Conversion equation

 $V_0 = (P_1 \times V_1 - P_2 \times V_1)/P_0$

Vo: Discharge volume [L]

P1: Tank initial pressure [MPa] (Absolute pressure)

V₁: Tank capacity [L]

P2: Tank pressure after release [MPa] (Absolute pressure)

Po: Atmospheric pressure [MPa] (Absolute pressure)

VXFA2 Type

Measuring conditions

Test circuit Refer to the circuit below.

Test sample ··· VXFA21A (Port size 3/4) VXFA22A (Port size 1) VXFA23A (Port size 1 1/2) VXFA24A (Port size 2)

Air tank capacity...VXFA21 to VXFA22: 100 L VXFA23 to VXFA24: 200 L VXFA25 to VXFA28: 1000 L

Energising time······150 msec

Pilot valve

VX232AA (Orifice, ø5, Rated voltage 24 VDC)

Piping length to the pilot valve

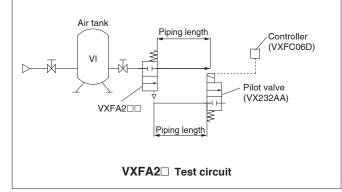

500 mm, 1000 mm, 1500 mm (Ø 10, t = 1.5)

Outlet piping length 500 mm

Thread size of outlet piping.....Open

How to calculate

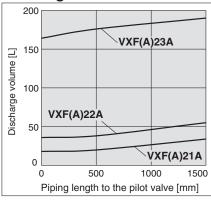

- 1. Set the tank pressure to 0.5 MPa.
- 2. Close the stop valve on the inlet of the tank.
- 3. Energise the pilot valve and read the tank pressure after releasing the pressure.

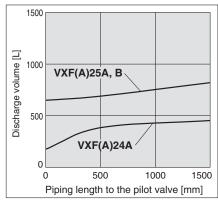

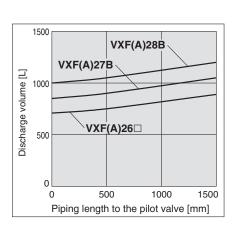

Note 1) If the regulator or the restrictor is installed right before the IN side of the valve, the valve may oscillate when it is turned off. Keep the regulator or the restrictor away from the valve for at least 1 m or change restriction.

Note 2) The dust collector valve is a large flow control valve in which air is discharged with high speed to clean the bag filter with impact wave. Tank capacity should be sufficient to secure impact wave and discharge flow rate. If the air tank capacity is insufficient, increased response time, malfunctions or oscillation may occur.

Discharge Volume

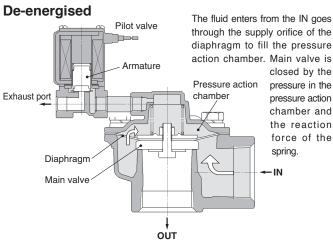

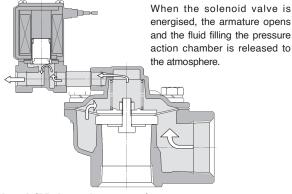

VXFA2 Series

Working Principle

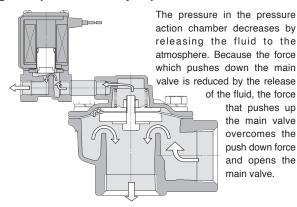

VXFA21, 22, 23

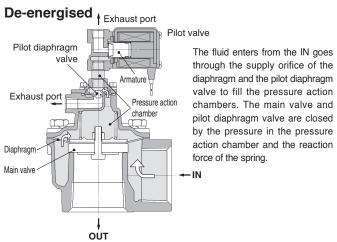

Right after energised

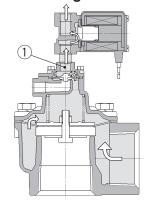

Energised (Main valve open)

VXFA24 to 28 (Double diaphragm)

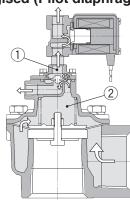

Right after energised

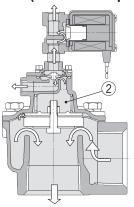

When the solenoid valve is energised, the armature opens and the fluid filling the pressure action chamber ① of the pilot diaphragm valve is released to the atmosphere.

Energised (Pilot diaphragm valve open)

The pressure in the pressure action chamber ① of the pilot diaphragm valve decreases by releasing the fluid to the atmosphere. Because the force which pushes down the pilot diaphragm valve is reduced by the release of the fluid, the force that pushes up the pilot diaphragm valve overcomes the push down force and opens the pilot diaphragm valve. Then, the fluid filling the pressure action chamber ② of the main valve is released to the atmosphere.

Energised (Main valve open)

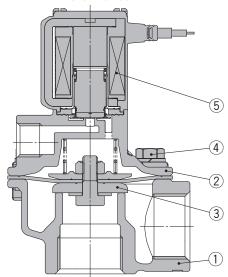

The pressure in the pressure action chamber ② of the main valve decreases by releasing the fluid to the atmosphere. Because the force which pushes down the main valve is reduced by the release of the fluid, the force that pushes up the main valve overcomes the push down force and opens the main valve.

Note 1) Spring is shipped together with the product, but not assembled.

Note 2) When the VXF26 is ordered without a silencer, and a silencer is attached later by the user, the operation may become unstable while ON. When attaching a silencer later, be sure to replace the diaphragm assembly as well. When ordering a product with a silencer and is used without the silencer, the operation may become unstable while OFF. In this case, the diaphragm assembly should be replaced.

Note 1) Spring is shipped together with the product, but not assembled.

Note 2) When the VXF26 is ordered without a silencer, and a silencer is attached later by the user, the operation may become unstable while ON. When attaching a silencer later, be sure to replace the diaphragm assembly as well. When ordering a product with a silencer and is used without the silencer, the operation may become unstable while OFF. In this case, the diaphragm assembly should be replaced.

Dedicated Controller For Operation/VXFC Series

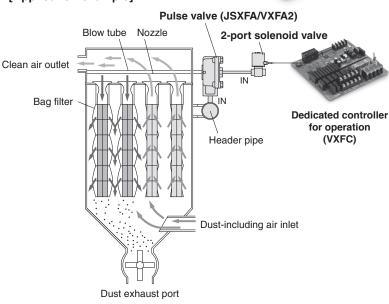

How to Order Controller

Specifications

Model		VXFC ₁₀ 6A	VXFC ₁₀ D	VXFC ₁₀ ⁰⁶ D-6		
Input voltage		85 to 240 VAC	24 to 48 VDC	12 VDC		
Output voltage		Same as input voltage				
	ON	0.01 to 0.99 s				
Time setting	OFF	0 to 299 s				
Time accuracy		±2%				
Number of outputs		6 to 10 points				
Operating ambient temperature		0 to 50°C (No condensation)				
Operating ambient humidity		45 to 80% (No condensation)				
Output current		0.5 A or less	0.5 A or less	0.5 A or less		
Power supply fuse		3 A	1 A	1 A		

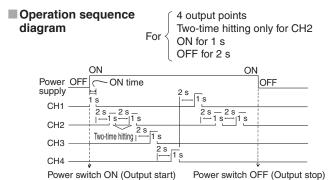

[Application example]

Two-time Hitting Function

A two-time hitting function has been adopted to improve the bag filter dusting efficiency. Turn ON the DIP switch for two-time hitting (OFF for one-time hitting).

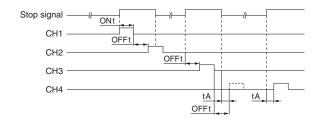

(Effective for up to the number of set channels)

Interrupt Operation Function

Interrupting an operation via an external switch is possible using input

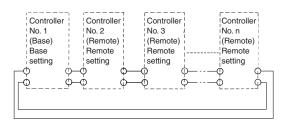

■ Operation sequence diagram

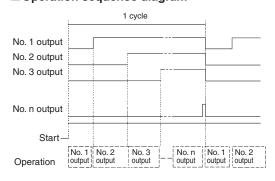

Cascade Connection (Multiple-board connection)

VXFC10: One board only allows 10 output points max., but the points can be increased to 20 or 30 output points by connecting cascades.

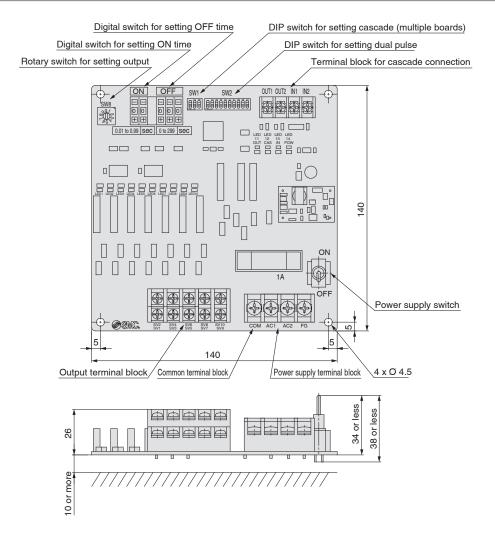

■ Connection

■ Operation sequence diagram

Dimensions

VXF(A) Series Glossary of Terms

Pressure Terminology

1. Maximum operating pressure differential

The maximum pressure differential (the difference between the inlet and outlet pressure) which is allowed for operation. When the outlet pressure is 0 MPa, this becomes the maximum operating pressure.

2. Minimum operating pressure differential

The minimum pressure differential (the difference between the inlet pressure and outlet pressure) required to keep the main valve fully open.

3. Maximum system pressure

The maximum pressure that can be applied inside the pipelines (line pressure).

[The pressure differential of the solenoid valve portion must not exceed the maximum operating pressure differential.]

4. Withstand pressure

The pressure in which the valve must be withstood without a drop in performance after holding for one minute under prescribed pressure and returning to the operating pressure range. [value under the prescribed conditions]

Electrical Terminology

1. Apparent power (VA)

Volt-ampere is the product of voltage (V) and current (A). Power consumption (W): For AC, W = V·A·cos θ .

For DC, $W = V \cdot A$.

Note) $\cos \theta$ shows power factor. $\cos \theta \approx 0.9$

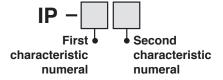

2. Surge voltage

A high voltage which is momentarily generated by shutting off the power in the shut-off area.

3. Degree of protection

A degree defined in the "JIS C 0920: Waterproof test of electric machinery/appliance and the degree of protection against the intrusion of solid foreign objects."

Verify the degree of protection for each product.

First Characteristics:

Degrees of protection against solid foreign objects

		3
	0	Non-protected
	1	Protected against solid foreign objects of 50 mmø and greater
	2	Protected against solid foreign objects of 12 mmø and greater
	3	Protected against solid foreign objects of 2.5 mmø and greater
	4	Protected against solid foreign objects of 1.0 mmø and greater
	5	Dust-protected
ı	6	Dust-tight

Electrical Terminology

Second Characteristics:

Degrees of protection against water

	20g.000 of protoction against water				
0	Non-protected	_			
1	Protected against vertically falling water drops	Dripproof type 1			
2	Protected against vertically falling water drops	Dripproof type 2			
_	when enclosure tilted up to 15°				
3	Protected against rainfall when enclosure tilted up to 60°	Rainproof type			
4	Protected against splashing water	Splashproof type			
5	Protected against water jets	Water-jet-proof type			
6	Protected against powerful water jets	Powerful water-jet-proof type			
7	Protected against the effects of temporary immersion in water	Immersible type			
8	Protected against the effects of continuous immersion in water	Submersible type			

Example) IP65: Dust-tight, Water-jet-proof type

"Water-jet-proof type" means that no water intrudes inside an equipment that could hinder from operating normally by means of applying water for 3 minutes in the prescribed manner. Take appropriate protection measures, since a device is not usable in an environment where a droplet of water is splashed constantly.

Others

1. Material

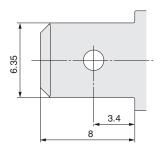

NBR: Nitrile rubber FKM: Fluoro rubber

2. Symbol

In the symbol (he had not be the valve is closed, flow is blocked from port 1 to port 2. However, if the pressure in port 2 is higher than port 1, the valve will not be able to block the fluid and it will flow from port 2 to port 1.

Flat Terminal

Flat terminal/Electrical connection size of molded coil.

Be sure to read this before handling the products. Refer to back cover for Safety Instructions.

2 Port Solenoid Valve For Dust Collector VXF2/VXFA2 Series

Design

Marning

1. Cannot be used as an emergency shutoff valve etc.

The valves presented in this catalogue are not designed for safety applications such as an emergency shutoff valve. If the valves are used in this type of system, other reliable safety assurance measures should also be adopted.

2. Extended periods of continuous energisation

This is a valve for pulse operation. Do not energize it continuously. Since a large amount of air is consumed, the diaphragm will oscillate (chatter) due to insufficient air supply on the inlet side, and this can lead to failure.

3. When the conduit type is used as equivalent to an IP65 enclosure, install a wiring conduit etc.

Silencer

∧ Caution

- 1. The silencer's response properties do not change in the initial stage, but will change due to the blockage after long use. Replace it after using about 500,000 times. This number is subject to change based on fluid quality and energizing time.
- 2. When using a silencer, make space for silencer replacement.

Selection

Marning

1. Air quality

1. Use clean air.

Do not use compressed air that contains chemicals, synthetic oils including organic solvents, salt or corrosive gases, etc., as it can cause damage or malfunction.

2. Install an air filter.

Install an air filter close to the valve on the upstream side. A filtration degree of 5 μ m or less should be selected.

3. Install an aftercooler or air dryer, etc.

Compressed air that contains excessive drainage may cause malfunction of valves and other pneumatic equipment. To prevent this, install an aftercooler or air dryer, etc.

 If excessive carbon powder is generated, eliminate it by installing a mist separator on the upstream side of valves.

If excessive carbon powder is generated by the compressor, it may adhere to the inside of the valves and cause a malfunction.

Selection

△ Warning

2. Ambient environment

Use within the allowable ambient temperature range. Check the compatibility between the product's composition materials and the ambient atmosphere. Be certain that the fluid used does not touch the external surface of the product.

3. Countermeasures against static electricity

Take measures to prevent static electricity since some fluids can cause static electricity.

4. Low temperature operation

- The valve can be used in fluid temperatures down to -10 °C. However, take measures to prevent freezing or solidification of impurities, etc.
- 2. When using the valve in cold climates, take appropriate countermeasures to prevent freezing in tubing by draining the water etc. When warming by a heater etc., be careful not to expose the coil portion to a heater. Installation of a dryer, heat retaining of the body is recommended to prevent a freezing condition in which the dew point temperature is high and the ambient temperature is low, and the high flow runs.

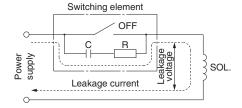

5. Fluid properties

Use a general compressed air with a filter of 5 μ m or less mounted on the inlet of the piping. (Excluding dry air)

⚠ Caution

1. Leakage voltage

When the solenoid valve is operated using the controller, etc., the leakage voltage should be the product allowable leakage voltage or less. Particularly when using a resistor in parallel with a switching element and using a C-R element (surge voltage suppressor) to protect the switching element, take note that leakage current will flow through the resistor, C-R element, etc., creating a possible danger that the valve may not turn off.

AC coil: 5 % or less of rated voltage DC coil: 2 % or less of rated voltage

- 2. The response performance and start-up speed of air operated type (VXFA2) is slower compared to the solenoid type (VXF2). Refer to the data for pilot piping.
- Note that for DC, idle time and return time increase if the voltage is lowered. If a surge voltage suppressor is installed, the return speed decreases.

Be sure to read this before handling the products. Refer to back cover for Safety Instructions.

2 Port Solenoid Valve For Dust Collector VXF2/VXFA2 Series

Mounting

△Warning

If air leakage increases or equipment does not operate properly, stop operation.

After mounting is completed, confirm that it has been done correctly by performing a suitable function test.

- 2. Do not apply external force to the coil section.

 When tightening is performed, apply a wrench or other tool to the outside of the piping connection parts.
- 3. Mount a valve with its coil position upward, not downward. When mounting a valve with its coil position downward, foreign objects in the fluid will adhere to the iron core leading to a malfunction. Especially for strict leakage control, such as with vacuum applications and non-leak specifications, the coil must be positioned upward.
- **4. Do not warm the coil assembly with a heat insulator etc.**Use tape, heaters, etc., for freeze prevention on the piping and body only. They can cause the coil to burn out.
- Avoid sources of vibration, or adjust the arm from the body to the minimum length so that resonance will not occur.
- 6. Painting and coating

Warnings or specifications printed or labeled on the product should not be erased, removed or covered up.

↑ Caution

1. Machine the mounting surface shape so that there are no gaps between the mounting surface and the product.

Correct mounting surface shape

Piping

⚠ Warning

1. During use, deterioration of the tube or damage to the fittings could cause tubes to come loose from their fittings and thrash about.

To prevent uncontrolled tube movement, install protective covers or fasten tubes securely in place.

For piping the tube, fix the product securely using the mounting holes so that the product is not in the air. **Piping**

∧ Caution

1. Preparation before piping

Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe.

Install piping so that it does not apply pulling, pressing, bending or other forces on the valve body.

- 2. Avoid connecting ground lines to piping, as this may cause electric corrosion of the system.
- Always tighten threads with the proper tightening torque.
 When attaching fittings to valves, tighten with the proper tightening torque shown below.

Tightening Torque for Piping

	<u> </u>				
Connection thread	Proper tightening torque	N∙m	Connection thread	Proper tightening torque N	l∙m
Rc1/4	12 to 14		Rc1 1/2	40 to 42	
Rc3/8	22 to 24		Rc2	48 to 50	
Rc1/2	28 to 30		Rc2 1/2	48 to 50	
Rc3/4	28 to 30		Rc3	48 to 50	
Rc1	36 to 38				

4. When connecting piping to a product

Avoid mistakes regarding the supply port etc.

- 5. If a regulator, or a restrictor, is installed immediately before or after the IN port of the valve, the main valve may oscillate (chatter). Install them away from the valve or change the restriction.
- 6. The header tank capacity should be sufficient. This is a valve for large flow rate, so if the capacity is small, the main valve may oscillate due to pressure drop or insufficient air supply.

Wiring

⚠ Warning

1. The solenoid valve is an electrical product. For safety, install an appropriate fuse and circuit breaker before use.

When using multiple solenoid valves, it is not sufficient to merely install one fuse on the inlet side. In order to ensure the safety of the devices, select and install a fuse for each circuit.

⚠ Caution

- As a rule, use electrical wire with a cross sectional area of 0.5 to 1.25 mm² for wiring.
 Furthermore, do not allow excessive force to be applied to the lines.
- Use electrical circuits which do not generate chattering in their contacts.
- 3. Use voltage which is within ± 10 % of the rated voltage. In cases with a DC power supply where importance is placed on responsiveness, stay within ± 5 % of the rated value. The voltage drop is the value in the lead wire section connecting the coil.
- 4. When a surge from the solenoid affects the electrical circuitry, install a surge voltage suppressor etc. in parallel with the solenoid. Or, adopt an option that comes with the surge voltage protection circuit. (However, a surge voltage occurs even if the surge voltage protection circuit is used.

Be sure to read this before handling the products. Refer to back cover for Safety Instructions.

2 Port Solenoid Valve For Dust Collector VXF2/VXFA2 Series

Operating Environment

△ Warning

- Do not use in an atmosphere having corrosive gases, chemicals, sea water, water, water vapor, or where there is direct contact with any of these.
- 2. Do not use in explosive atmospheres.
- 3. Do not use in locations subject to vibration or impact.
- 4. Do not use in locations where radiated heat will be received from nearby heat sources.
- 5. Employ suitable protective measures in locations where there is contact with water droplets, oil or welding spatter, etc.

Maintenance

⚠ Warning

1. Removing the product

The valve becomes hot depending on the fluid temperature. Confirm that the valve temperature has dropped sufficiently before performing work. If touched inadvertently, there is a danger of being burned.

- Shut off the fluid supply and release the fluid pressure in the system.
- 2. Shut off the power supply.
- 3. Remove the product.

2. Low frequency operation

Switch valves at least once every 30 days to prevent malfunction. Also, in order to use it under the optimum state, conduct a regular inspection once a half year.

∧ Caution

1. Filters

- 1. Be careful regarding clogging of filters.
- 2. Replace filter elements after one year of use, or earlier if the pressure drop reaches 0.1 MPa.

2. Storage

In case of long term storage after use, thoroughly remove all moisture to prevent rust and deterioration of rubber materials etc.

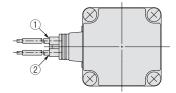

3. Exhaust the drainage from an air filter periodically.

Electrical Connections

⚠ Caution

■ Grommet

Class B coil: AWG20 Outside insulator diameter of 2.5 mm

	Lead wire color		
Rated voltage	1	2	
DC	Black	Red	
100 VAC	Blue	Blue	
200 VAC	Red	Red	
Other AC	Gray	Gray	

* There is no polarity.

Electrical Connections

↑ Caution

■ DIN terminal

Disassembly

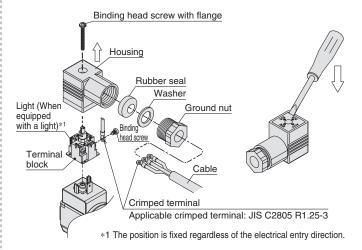

- After loosening the binding head screw with flange, then if the housing is pulled in the direction of the arrow, the connector will be removed from the solenoid valve.
- 2. Pull out the binding head screw with flange from the housing.
- 3. There is a cutout on the bottom of the terminal block. Insert a small flat head screwdriver, etc. into this cutout, and remove the terminal block from the housing. (See figure below.)
- 4. Remove the ground nut, and pull out the washer and the rubber seal.

Wiring

- Pass the cable through the ground nut, washer and rubber seal in this order, and insert these parts into the housing.
- Loosen the binding head screw of the terminal block, then insert the core wire or the crimped terminal of the lead wire into the terminal, and securely fix it with the binding head screw. The binding head screw of the terminal block is M3.
- Note 1) Tighten the screw to a torque of between 0.5 and 0.6 N·m.
- Note 2) Cable O.D.: ø6 to ø12 mm
- Note 3) For an outside cable diameter of ø9 to 12 mm, remove the internal parts of the rubber seal before using.

Assembly

- Pass the cable through the ground nut, washer, rubber seal and the housing in this order, and connect to the terminal block. Then, set the terminal block inside the housing. (Push in the terminal block until it snaps into position.)
- Insert the rubber seal and the washer in this order into the cable entry of the housing, and then tighten the ground nut securely.
- 3. Insert the gasket between the bottom part of the terminal block and the plug attached to the equipment, and then insert the binding head screw with flange from the top of the housing, and tighten it. Note 1) Tighten the screw to a torque of between 0.5 and 0.6 N·m.
 - Note 2) The orientation of the connector can be changed in steps of 9 0 ° by changing the method of assembling the housing and the terminal block.

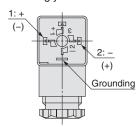

Be sure to read this before handling the products. Refer to back cover for Safety Instructions.

2 Port Solenoid Valve For Dust Collector VXF2/VXFA2 Series

Electrical Connections

⚠ Caution

Internal connections are as shown below. Make connections to the power supply accordingly.

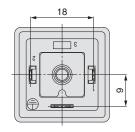

Terminal no.	1	2
DIN terminal	+ (-)	- (+)

* There is no polarity.

DIN (EN175301-803) Terminal

This DIN terminal corresponds to the Form A DIN connector with an 18 mm terminal pitch, which complies with EN175301-803B.

■ Conduit terminal

Disassembly

 Loosen the mounting screw, and remove the terminal cover from the conduit terminal.

Wiring

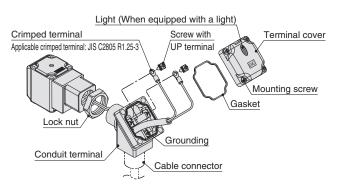

- 1. Insert the cable into the conduit terminal.
- Loosen the screw with UP terminal of the conduit terminal, then insert the core wire or the crimped terminal of the lead wire into the terminal, and securely fix it with the screw with UP terminal. Note 1) Tighten the screw to a torque of between 0.5 and 0.6 N·m.

⚠ Caution

■ Conduit terminal

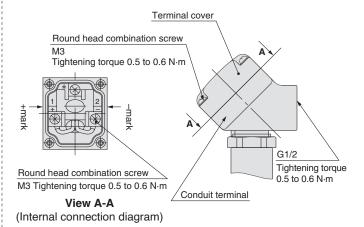

Assembly

- Insert the gasket into the conduit terminal, and then clamp the terminal cover with the mounting screw.
 - Note 1) Tighten the screw to a torque of between 0.5 and 0.6 N·m. Note 2) When changing the orientation of the conduit terminal, carry out the following procedure.
 - Apply a tool (monkey wrench, spanner, etc.) to the width across flats of the conduit terminal, and turn the terminal in the counterclockwise direction.
 - 2. Loosen the lock nut.
 - Turn the conduit terminal in the clamping direction (clockwise direction) to about 15° ahead of the desired position.
 - 4. Turn the lock nut by hand to the coil side until it is lightly tightened.
 - 5. Apply a tool to the width across flats of the conduit terminal, and turn it to the desired position (through an angle of about 15°) so as to clamp the conduit terminal.
 Note) When changing the orientation by applying additional tightening force to the conduit terminal from the factory-set position, turn no more than one half a turn.

Make connections according to the marks shown below.

- \cdot Use the tightening torques below for each section.
- · Properly seal the terminal connection (G1/2) with the special wiring conduit etc.

Be sure to read this before handling the products. Refer to back cover for Safety Instructions.

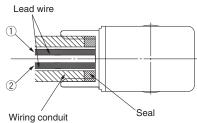

2 Port Solenoid Valve For Dust Collector VXF2/VXFA2 Series

Electrical Connections

■ Conduit

When used as an IP65 equivalent, use seal to install the wiring conduit. Also, use the tightening torque below for the conduit.

Class B coil: AWG20 Outside insulator diameter of 2.5 mm

(Port size G1/2 Tightening torque 0.5 to 0.6 N·m)

Dedicated Controller For Operation VXFC Series

Wiring

⚠ Warning

1. The controller starts its output the moment the power switch is turned ON. Be aware that even if the power switch is turned OFF, power is connected to the terminal block.

∕!∖ Caution

- 1. Make sure that the power supply voltage to be input matches the voltage in the controller's specifications. The power supply voltage that has been input becomes the voltage that is output to the solenoid valves.
- 2. Connect a ground that is rated Class 3 or greater to the power supply terminal block's FG.
- 3. If the power source is DC, use caution to its polarity. If the polarity is incorrect, it may result in a malfunction or damage.
- 4. For details, refer to the separate Operation Manual.
- 5. The solenoid valve mounted on the controller should be equipped with a surge voltage suppressor.

Operating Environment

⚠ Warning

- 1. Operate under conditions that are free of vibration and impact.
- 2. Operate in an ambient temperature range between 0 °C and
- 3. Operate in an ambient humidity range between 45 % to 85 % (with no condensation).

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC) 1), and other safety regulations.

Danger indicates a hazard with a high level of risk ♠ Danger: which, if not avoided, will result in death or serious

Warning indicates a hazard with a medium level of risk Marning: which, if not avoided, could result in death or serious

Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate

1) ISO 4414: Pneumatic fluid power - General rules and safety requirements for systems and their components.

ISO 4413: Hydraulic fluid power - General rules and safety requirements for systems and their components.

ISO 10218-1: Robots and robotic devices - Safety requirements for industrial robots - Part 1: Robots.

etc.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications. Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on

necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- 3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.
 - 1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
 - 2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
 - 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
- 4. Our products cannot be used beyond their specifications. Our products are not developed, designed, and manufactured to be used under the following conditions or environments. Use under such conditions or environments is not covered.
 - 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
 - 2. Use for nuclear power, railways, aviation, space equipment, ships, vehicles, military application, equipment affecting human life, body, and property, fuel equipment, entertainment equipment, emergency shut-off circuits, press clutches, brake circuits, safety equipment, etc., and use for applications that do not conform to standard specifications such as catalogues and operation manuals.
 - 3. Use for interlock circuits, except for use with double interlock such as installing a mechanical protection function in case of failure. Please periodically inspect the product to confirm that the product is operating properly.

We develop, design, and manufacture our products to be used for automatic control equipment, and provide them for peaceful use in manufacturing industries.

Use in non-manufacturing industries is not covered.

Products we manufacture and sell cannot be used for the purpose of transactions or certification specified in the Measurement Act.

The new Measurement Act prohibits use of any unit other than SI units in Japan.

Limited warranty and **Disclaimer/Compliance** Requirements

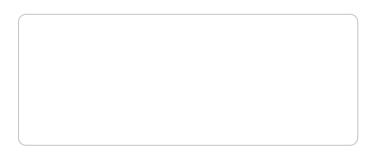

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements". Read and accept them before using the product.

Limited warranty and Disclaimer

- 1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first. 2) Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.
- 2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited

Compliance Requirements

- 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.
